WEAVERS OF ETERNITY
PARACORD

5 KNOTS WEAVERS MUST MASTER

WELCOME!

Thank you for downloading this eBook! You'll learn 5 knots that every paracord Weaver should master. These knots are great for beginners to learn, but also they are knots every paracord veteran should master! This is ultimately a preview to the full length eBook that either will be available or is already available depending on when you downloaded this. You'll be able to get all relevant updates now that you've subscribed to the Weavers Of Eternity mailing list or go to www.weaversofeternity.com for more information. Again, thank you for downloading and I hope you enjoy!

Best Regards,
- Tim

DIAMOND KNOT

> The Diamond Knot is one of the best stopper knots for knot and loop clasp bracelets. It's also great for zipper pulls, lanyards, and simple keychains. This is one of those "MUST MASTER" knots.

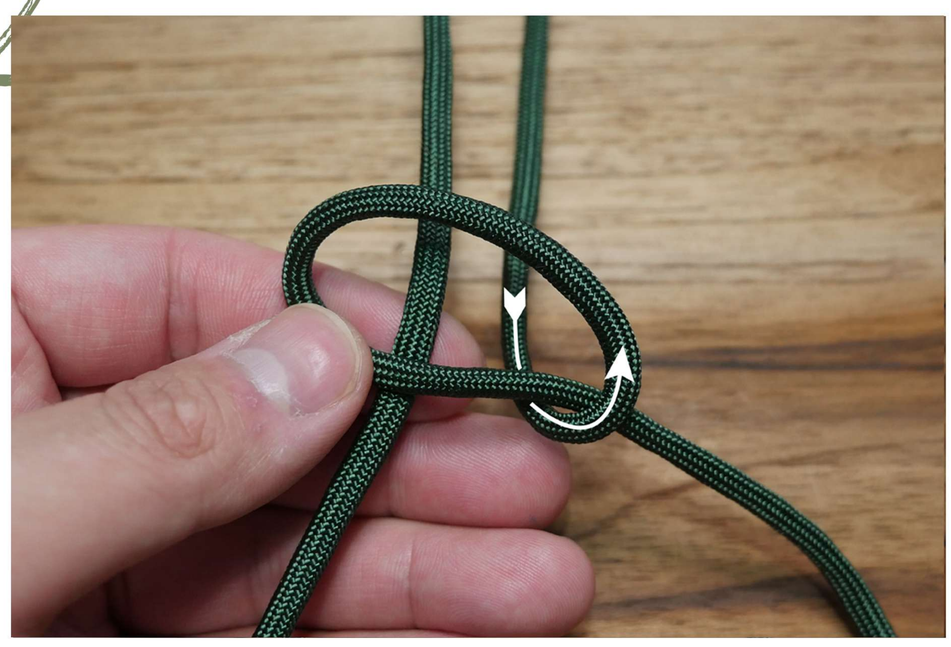
TOOLS YOU WILL NEED

Amount of paracord will vary depending on your project, but I would suggest at least 6-8" (15-20 cm) of cord on each side to tie this knot.

1

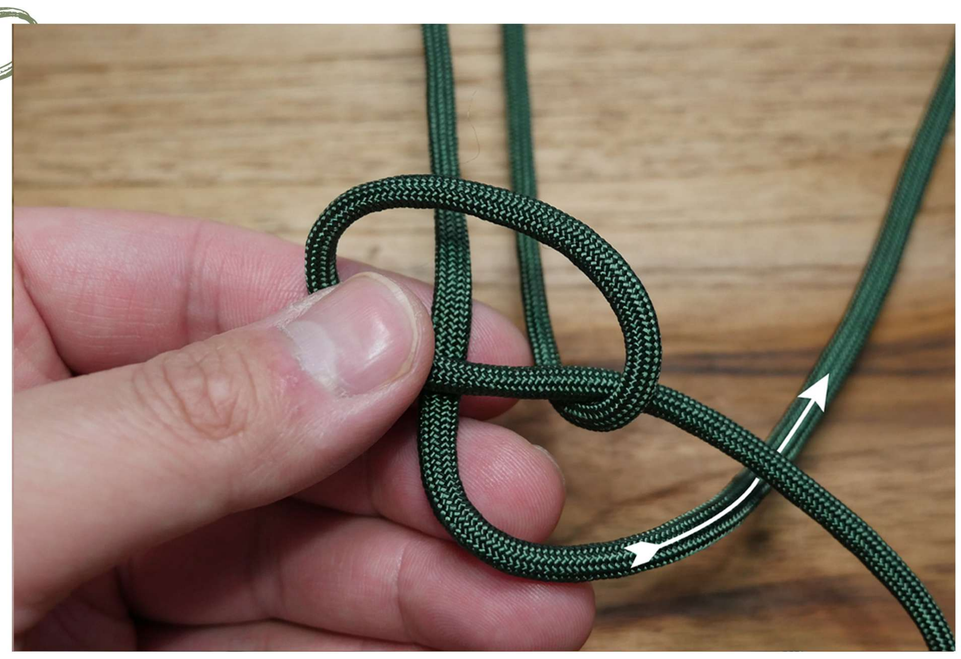
Start with both terminal ends of your strands pointing downwards.

2



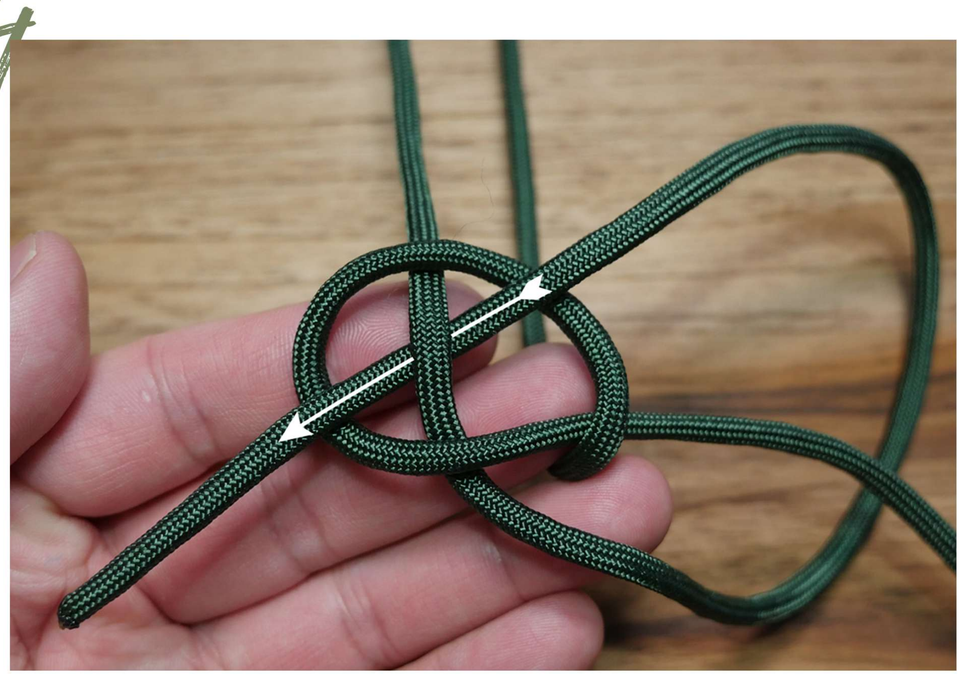
Make a counterclockwise loop with the right side strand and lay it on top of the left strand.

3



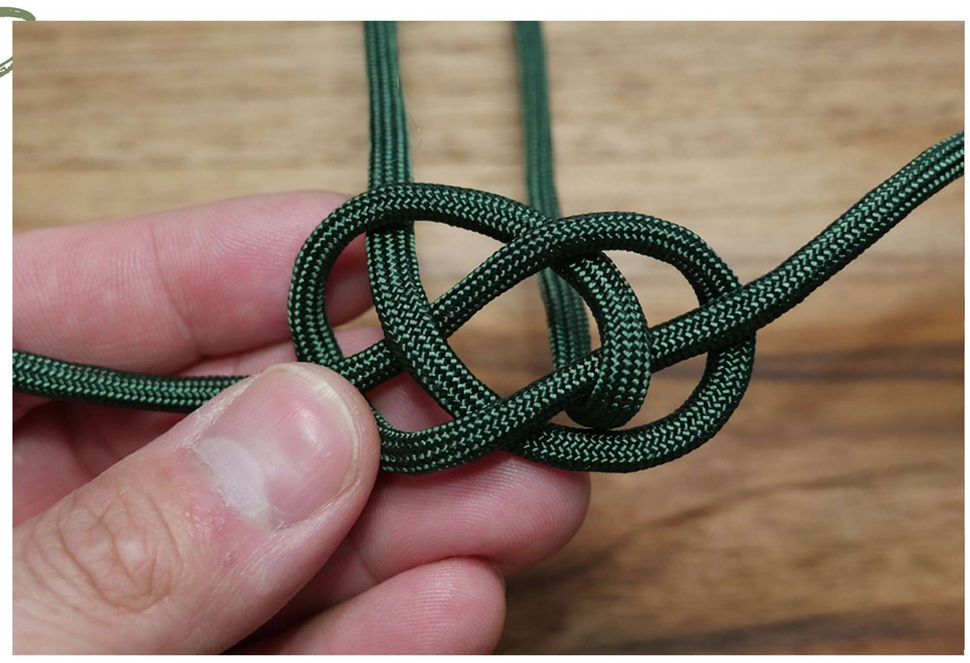
Take the left side strand under the right strand.

4



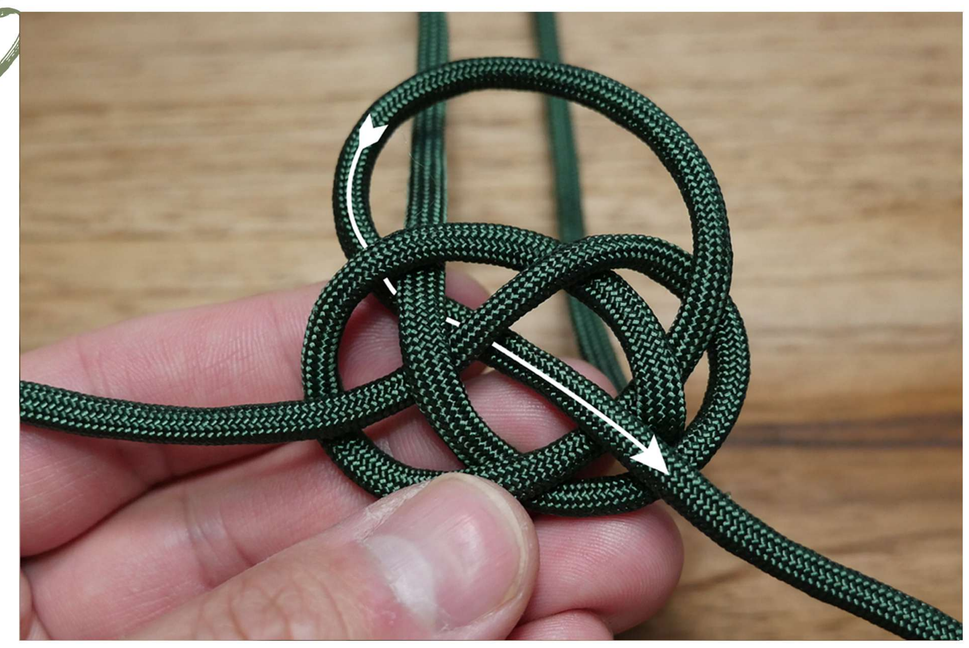
Then bring the left strand in front and under itself in the middle of the counterclockwise loop.

5



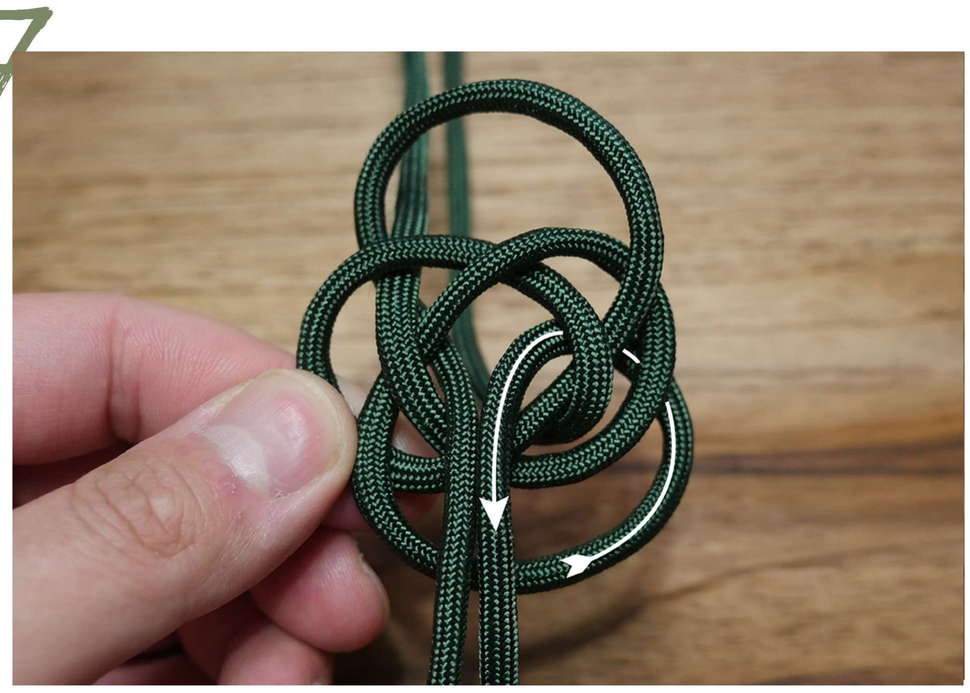
Even out the strands to form a Carrick's Bend.

6



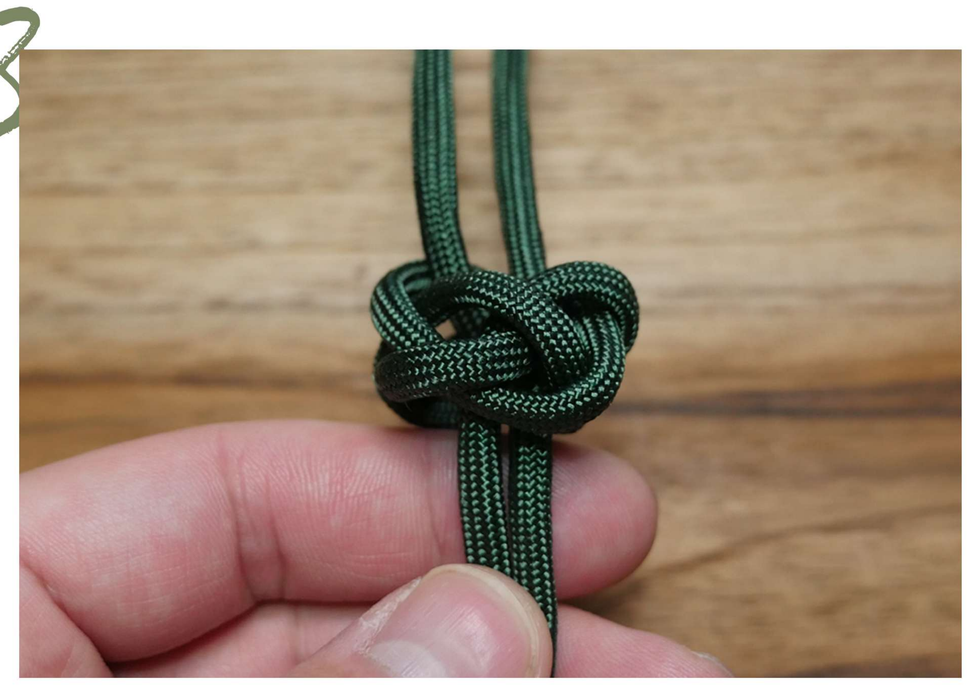
With the right side cord, go counterclockwise past the left base strand and through the opening in the middle.

7



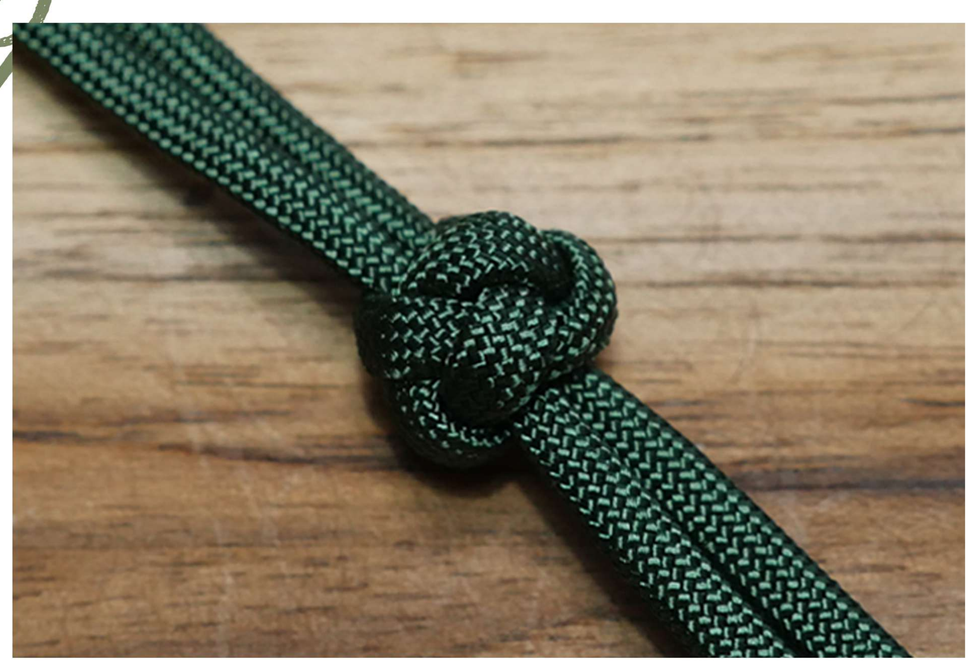
With the left side cord, go counterclockwise past the right base strand and through the opening in the middle.

8



Gather both terminal ends and cinch the knot closed.

9



Tighten the knot and you've now tied a Diamond Knot.

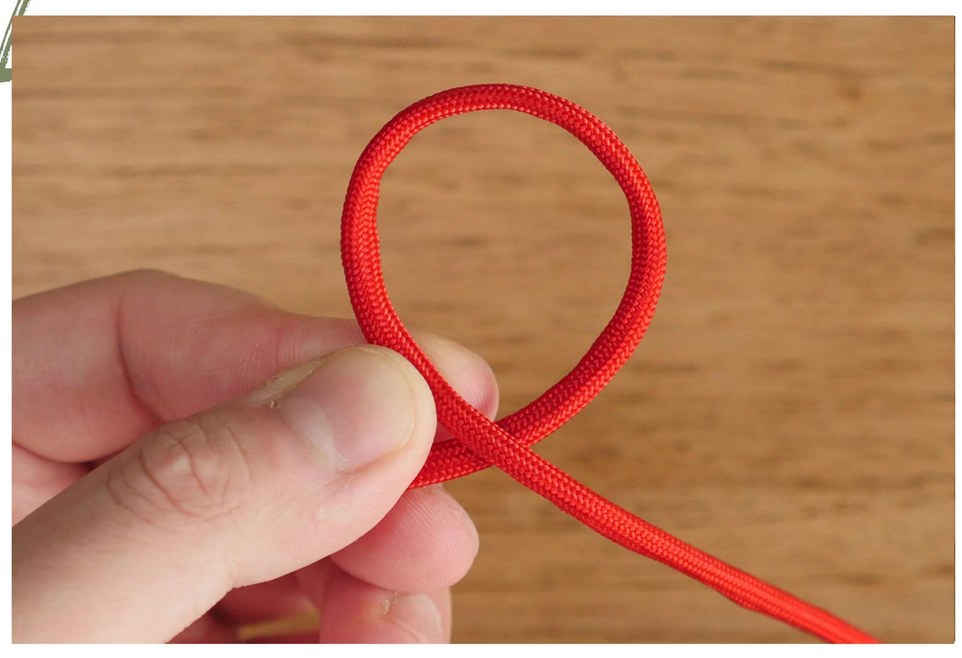
SINGLE STRAND DIAMOND KNOT

"The Single Strand Diamond Knot, also known as the Celtic Button Knot, is great for finishing single terminal ends on projects. They can also be great for knot and loop clasps on simple single strand bracelets."

TOOLS YOU WILL NEED

You'll need about 8-10" (20-25 cm) to tie this knot comfortably.

1

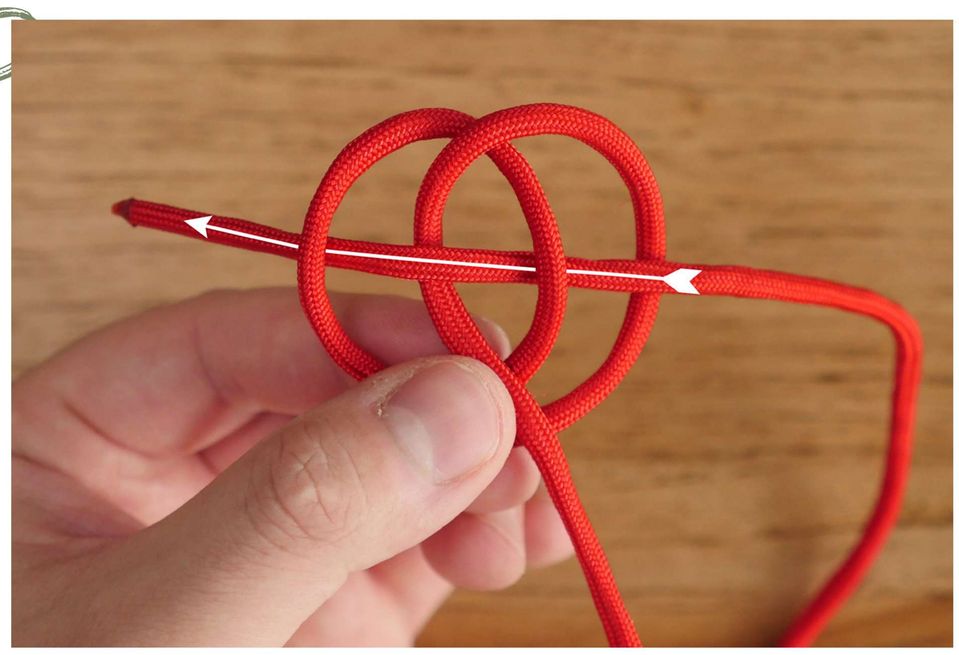


Make a counterclockwise loop with the majority of your cord on the right side. Terminal end resting on the front.

2

Make a second counterclockwise loop and lay it on top fo the first one.

3

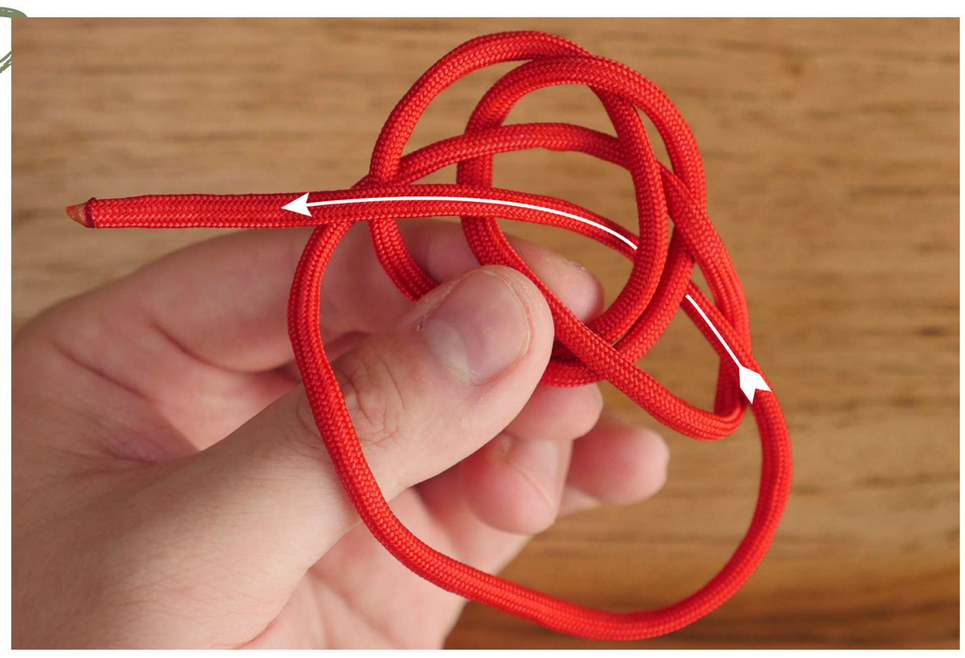


With the right terminal end, pass it through the middle opening going over, under, over and under the strands from right to left.

4

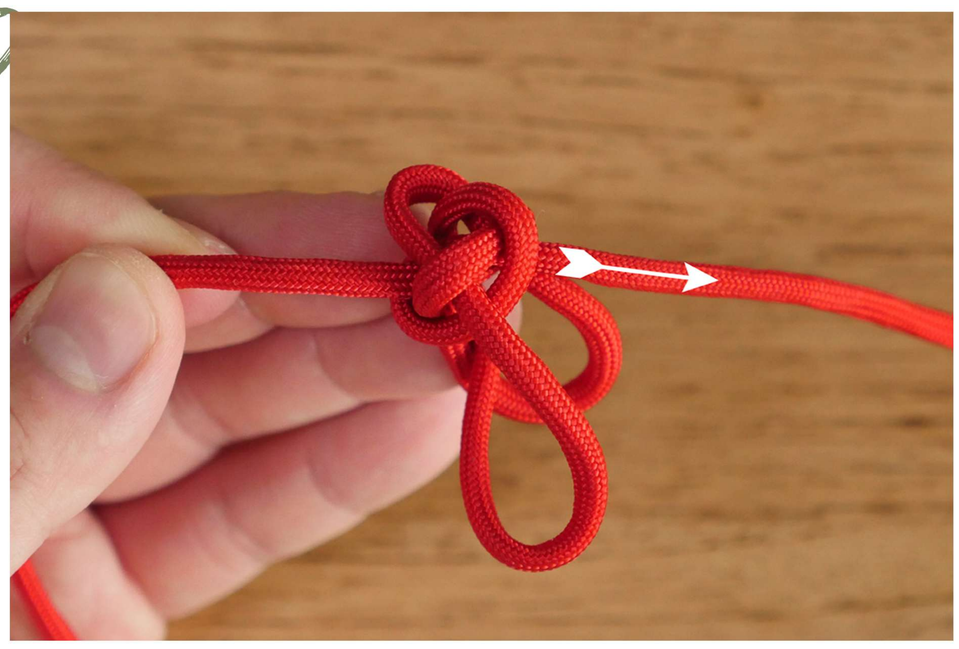
Pass the majority of the cord to the left side.

5



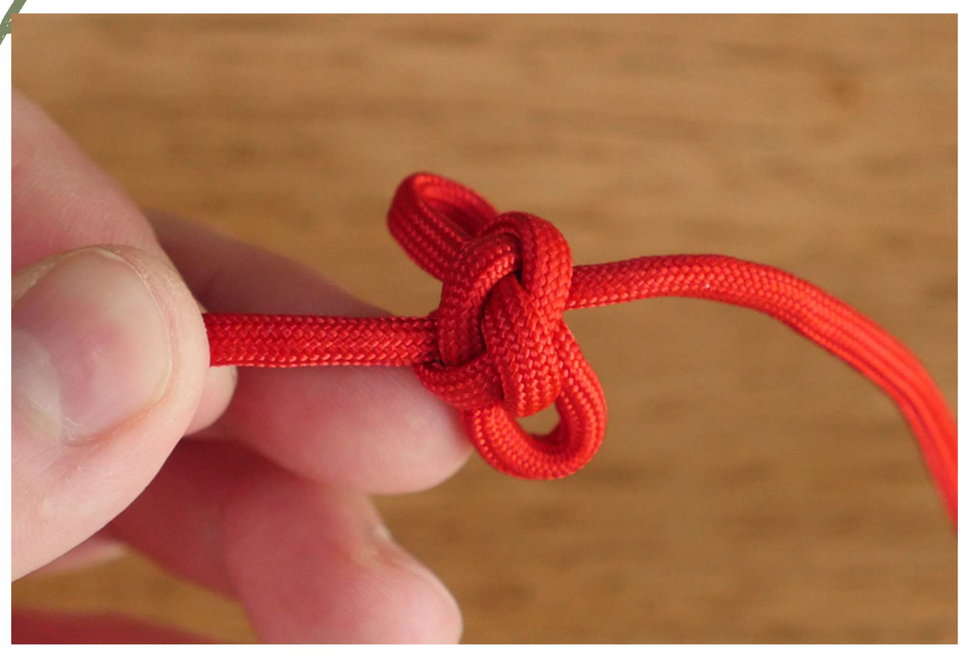
Bring the cord around the front and go over the 1st outside strand and under the next 2, then going through the middle.

6



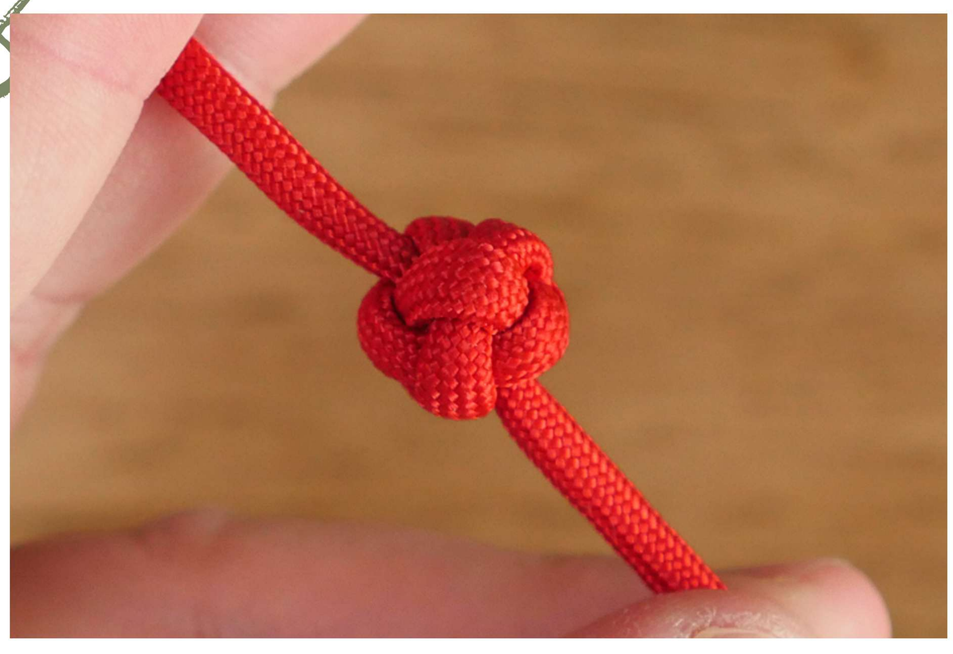
Pull the terminal end and cinch the slack out of the knot.

7



Continue working all the slack out. Rolling the knot in between your thumb and index can help round the knot out.

8



Once completely tightened you have now tied your single strand diamond knot.

THICK SNAKE KNOT AND LOOP

THICK SNAKE KNOT AND LOOP

This is a variation of the Snake knot where the snake knots are tied over a two strand core. This creates a slightly thicker snake knot and also allows you to have a different colored core that can make a nice accent color for the knot and loop clasp.

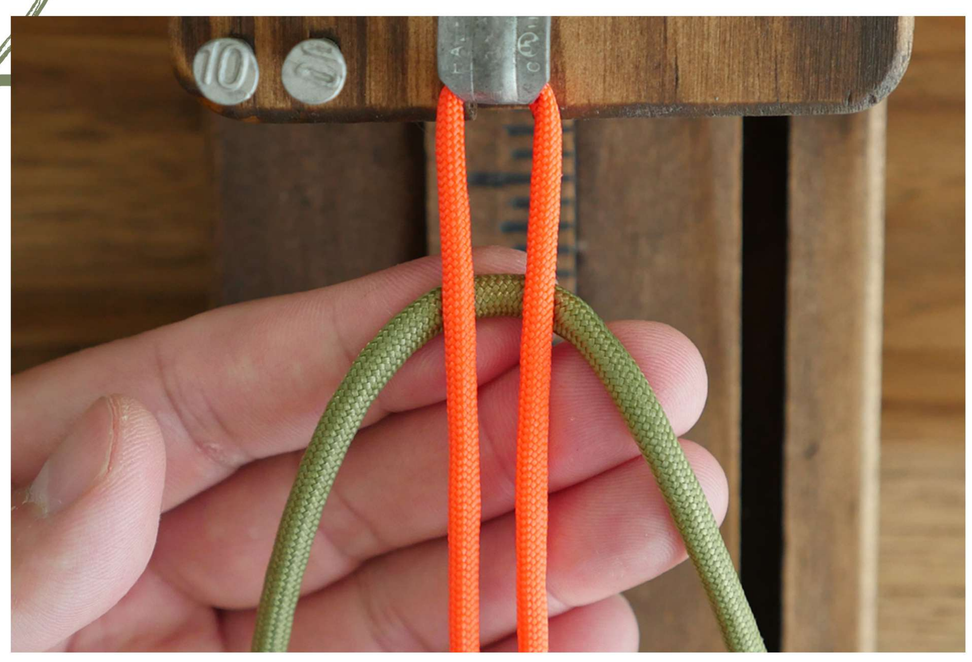
TOOLS YOU WILL NEED

2.5 FT (76.2 CM) Neon Orange 550 Paracord
7.25 FT (221 CM) Moss 550 Paracord
Bracelet Cirumference: 7 IN (18.4 CM)

1

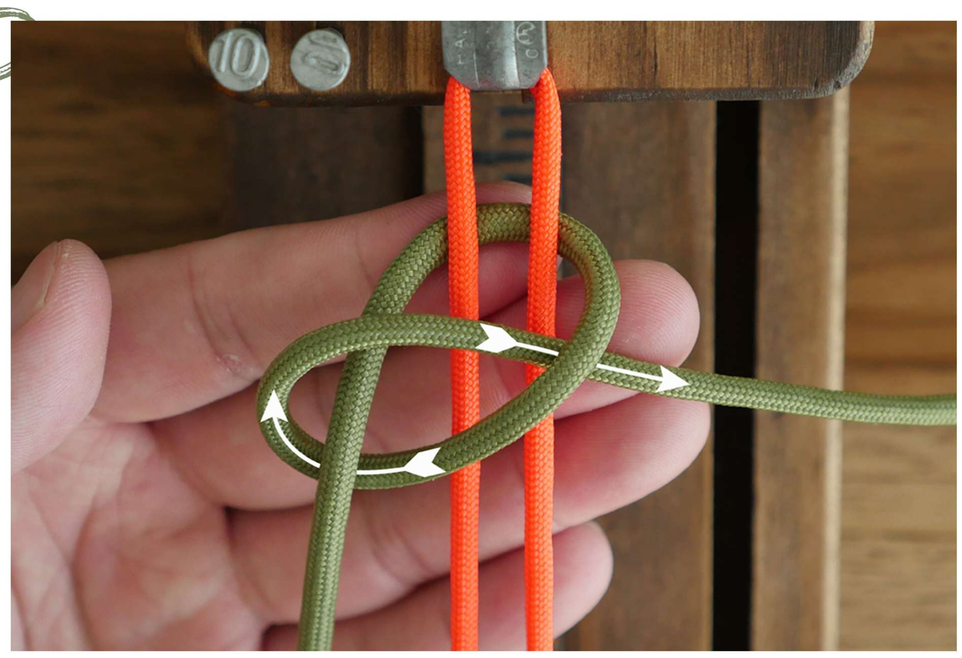
With your orange core strand, tie a diamond knot to make your knot and loop core.

2



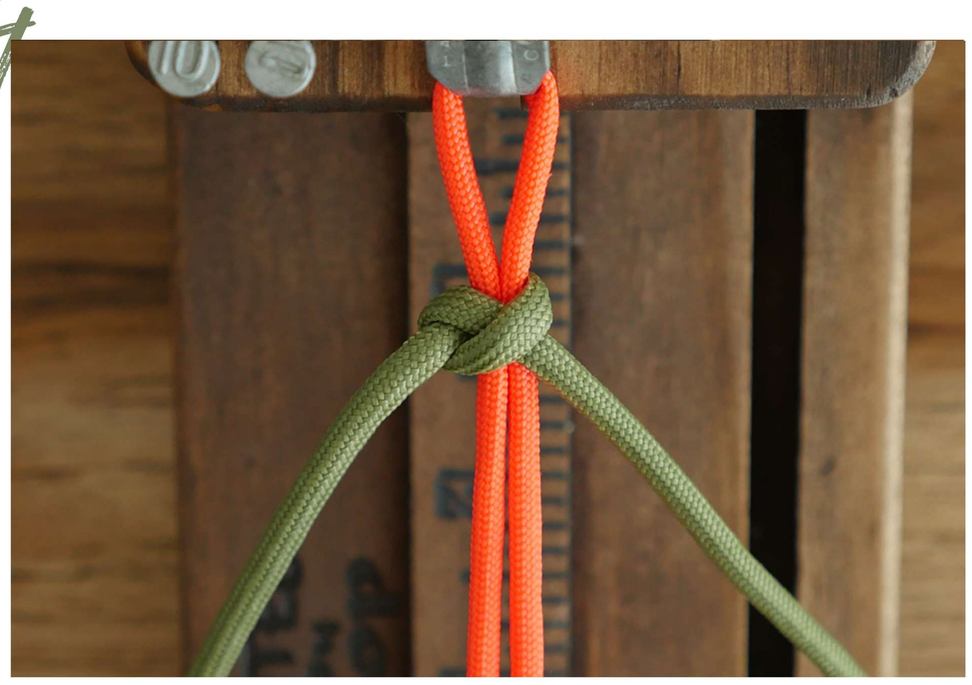
Attach your core to your jig if using one and place the midpoint of the moss cord behind the core strands.

3



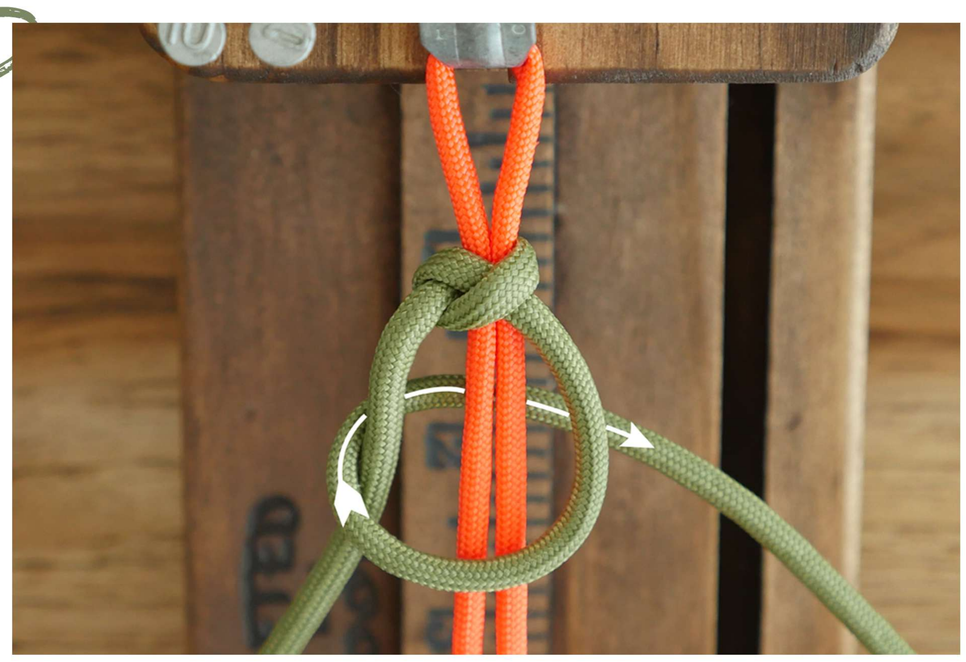
Make an underhand loop with the right moss strand around the left .

4



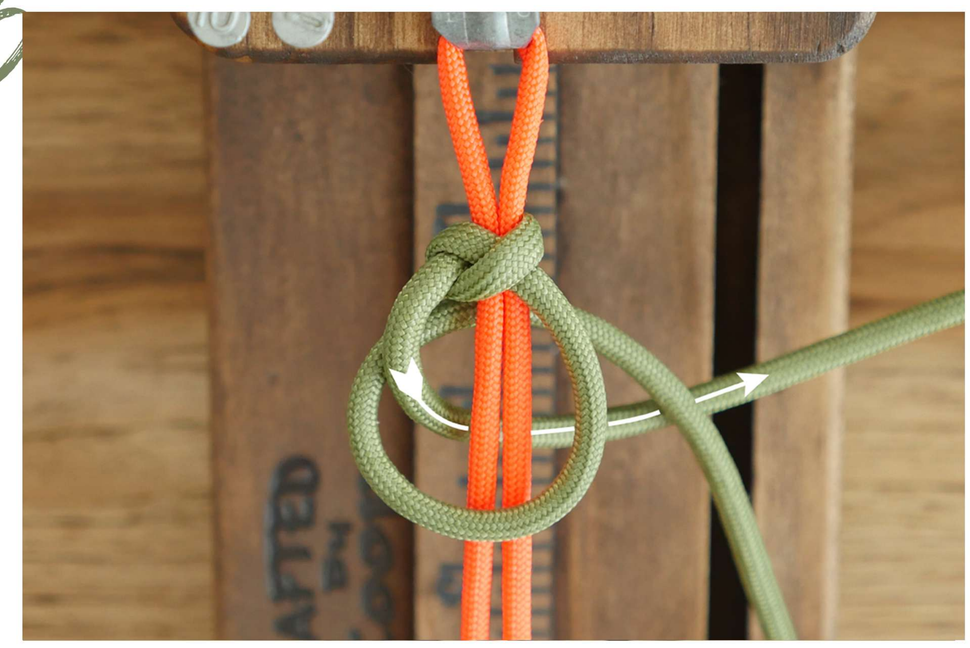
Pull that first knot tight to secure the moss strands to the core.

5



Make an underhand loop with the right strand around the core strands and left strand.

6

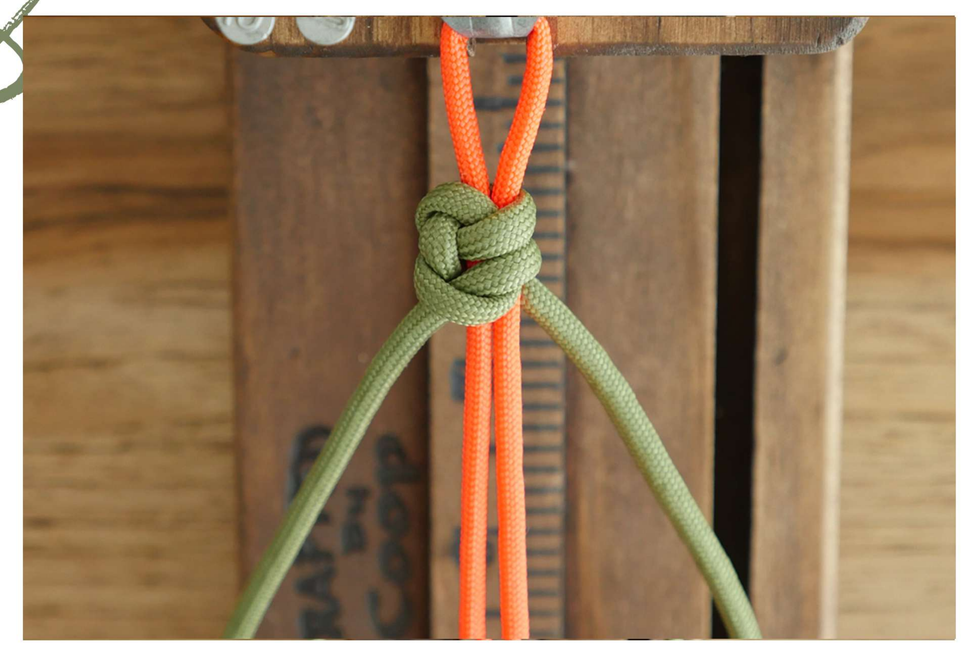


The left strand goes behind the right standing end.

7

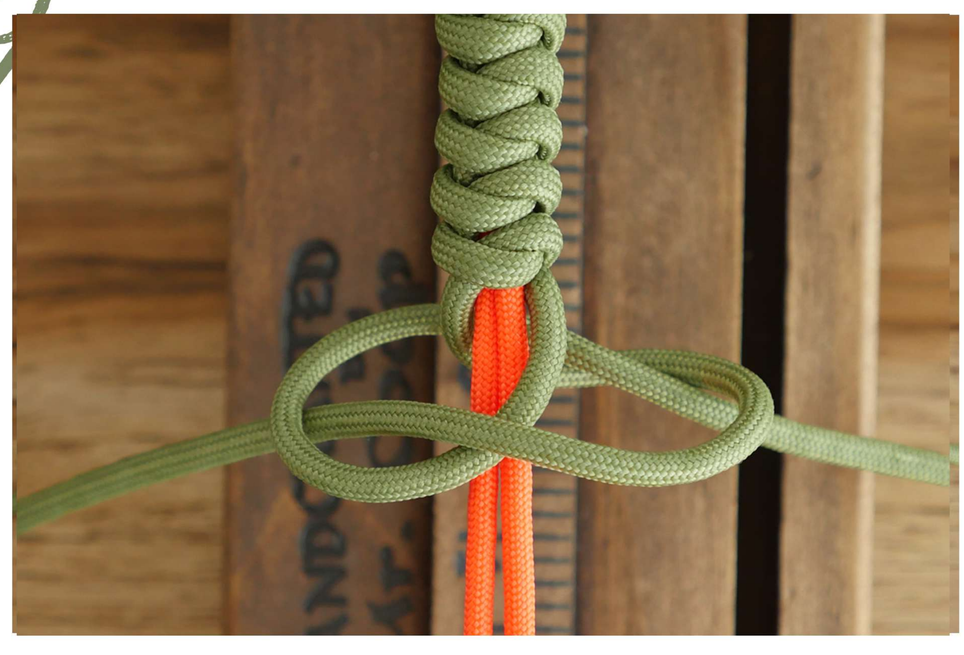
Around the front and through the underhand loop on the left.

8



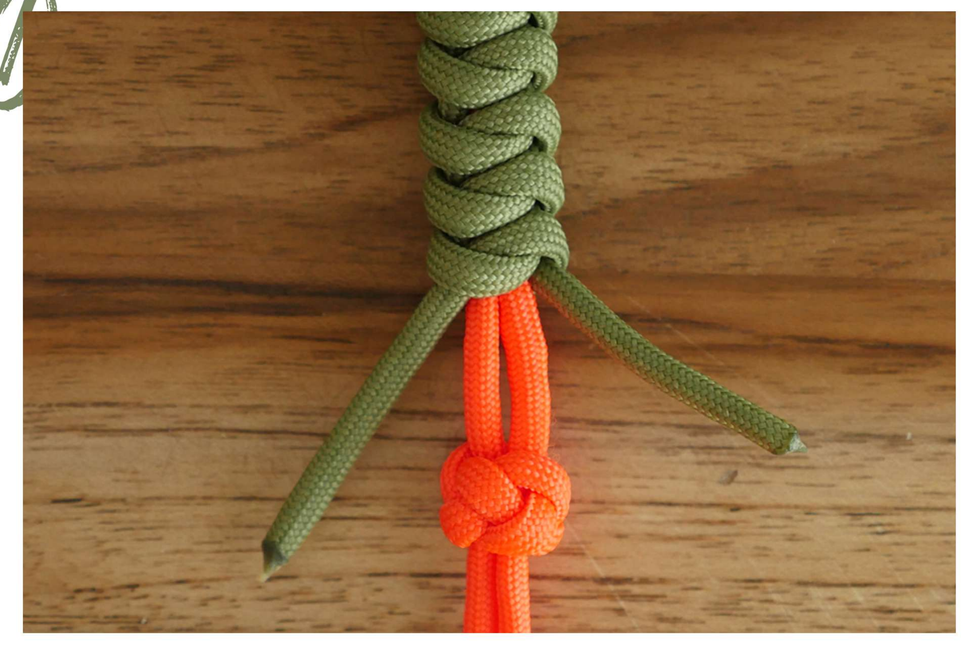
Pull tight and cinch the snake knot closed.

9



Repeat steps 5-8 working your way down the core strands.

10



Once you reach the bottom of your bracelet, stop just before the diamond knot.

11

Snip, melt, and press down on the excess snakt knot cords as well as the excess at the end of the diamond knot.

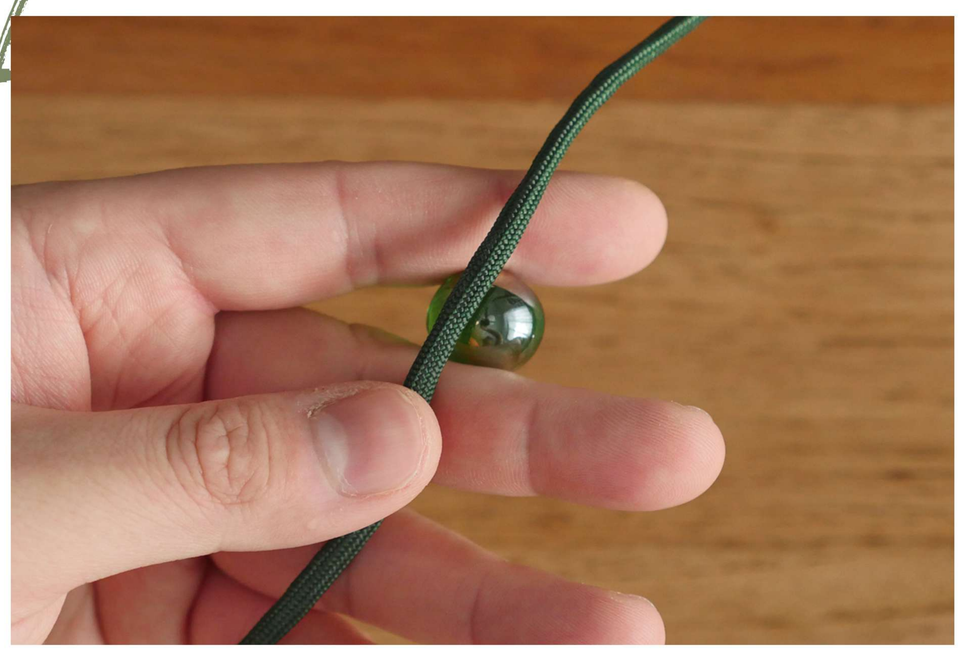
BASIC MONKEY'S FIST

"The Monkey's Fist was traditionally used to weigh down an end of a line so that it could be tossed or thrown. Using paracord you can use the monkey's fist to make zipper pulls, key chains, and even skill toys like a begleri."

TOOLS YOU WILL NEED

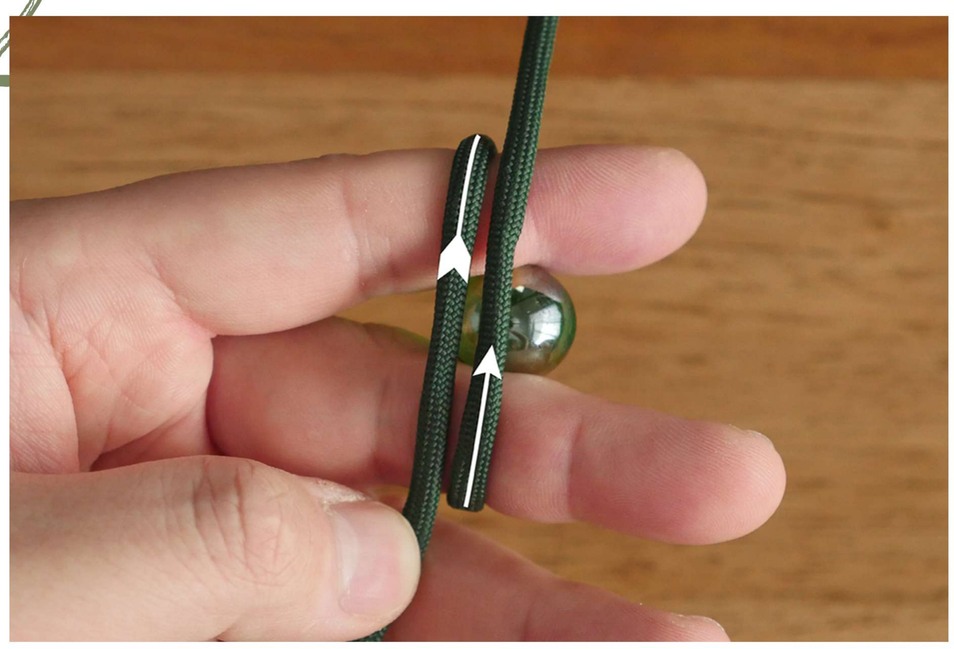
3-5 FT (91- 152 CM) Green 550 Paracord
1/2" (13 MM) Marble

1



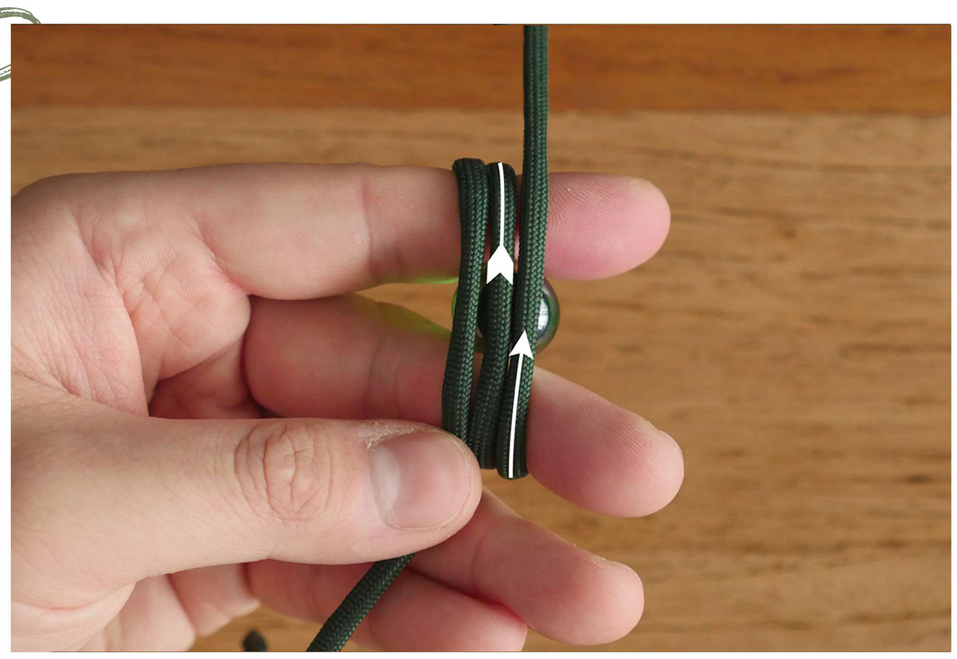
Starting with about 6-10" (15-25 CM) in from the standing end, hold the marble in between your index and middle fingers.

2



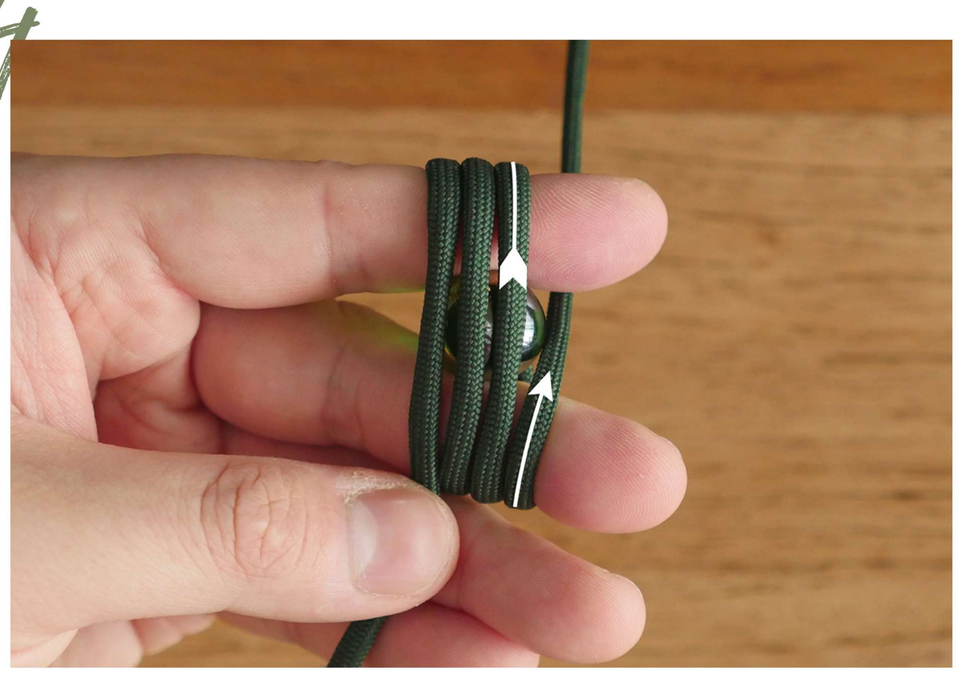
Start wrapping your paracord around your two fingers going away from you.

3



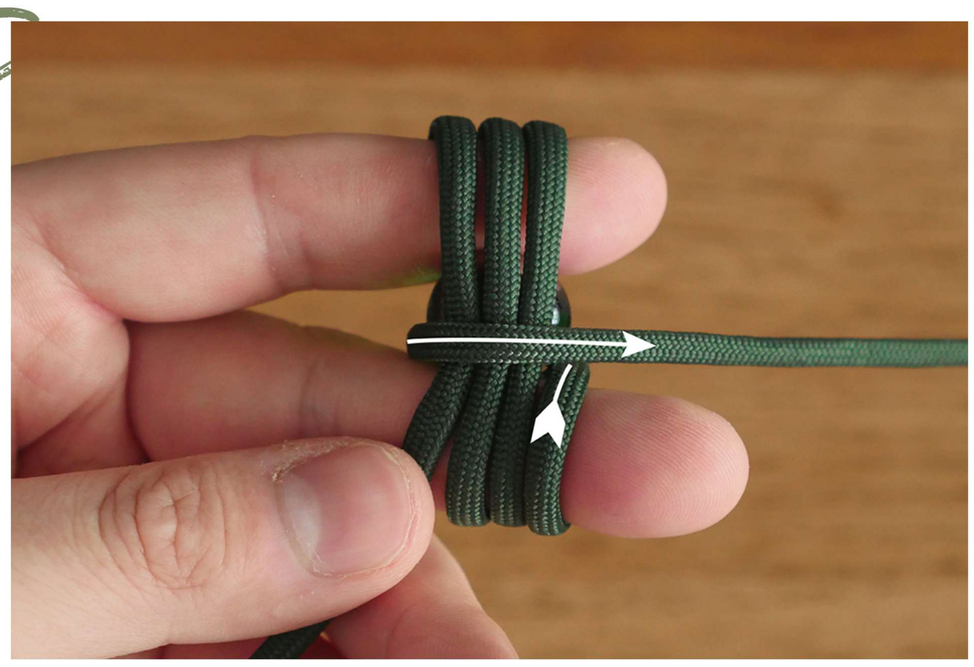
Wrap 3 passes to cover the marble.

4



After the third pass, bring the running end over your middle finger and lay it perpendicular to the first set of passes.

5



Start wrapping perpendicularly around the first set of passes.

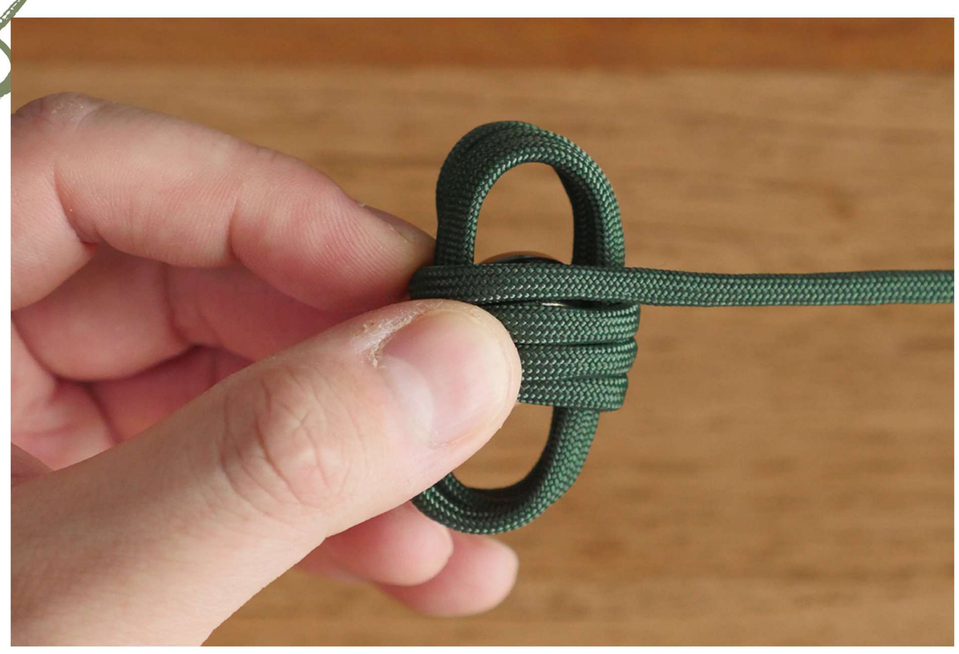
6

Keep the wraps neatly stacked and not overlapping.

7

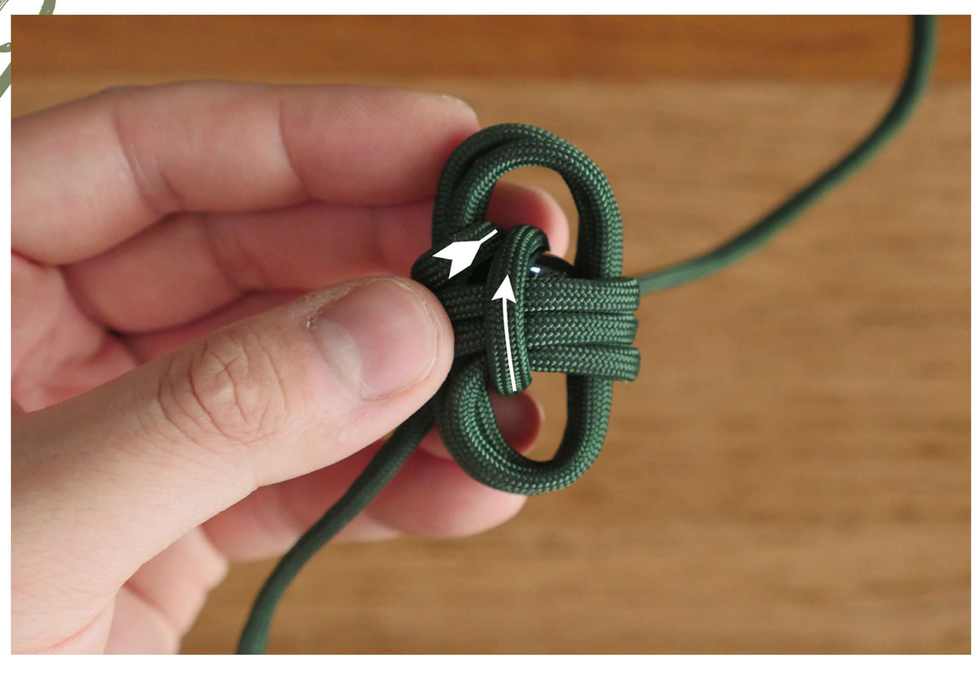
Wrap 3 passes working your way up the marble.

8



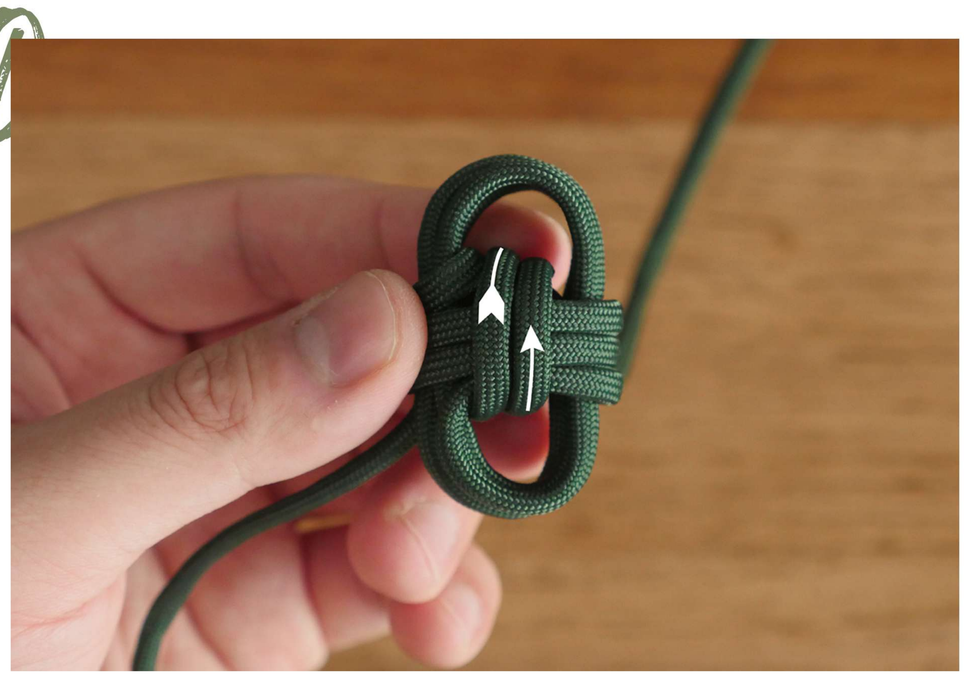
After the third pass, remove your fingers from the wraps.

9



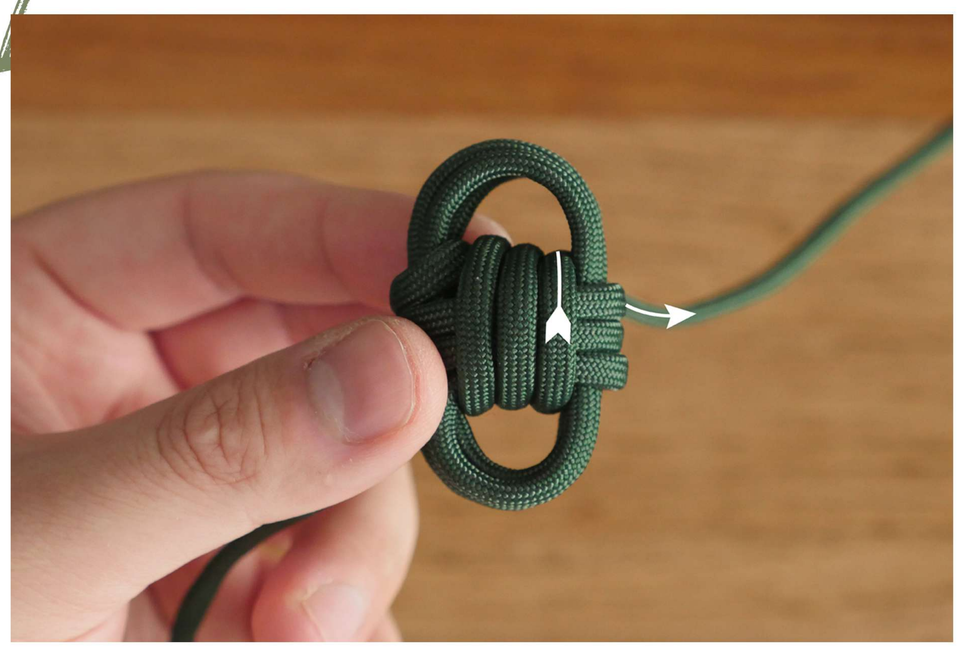
Next start wrapping the final set of 3 passes through the spaces above and below the marble.

10



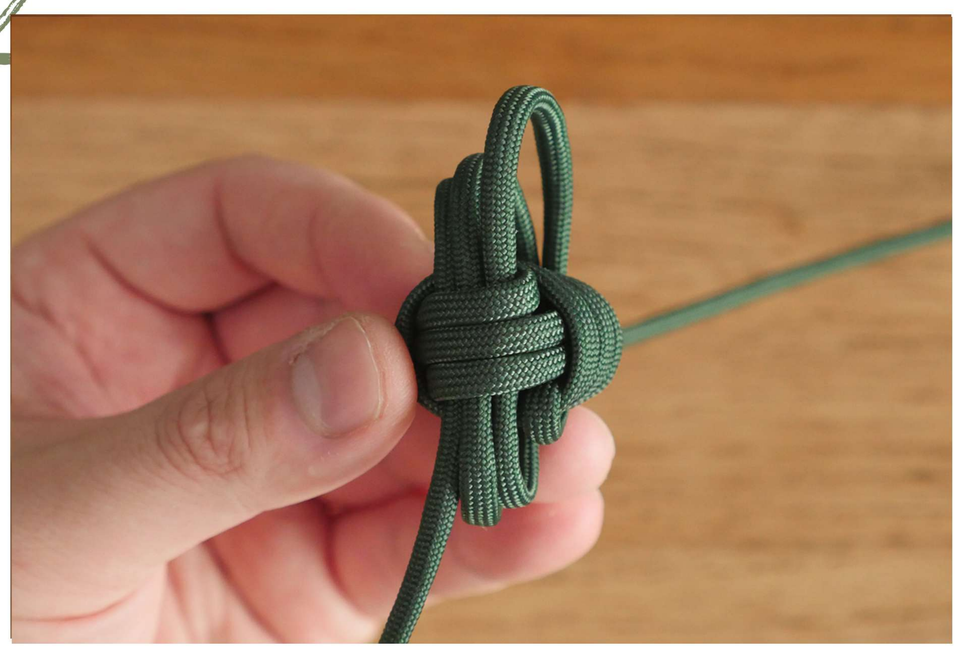
Make your way across the marble.

11



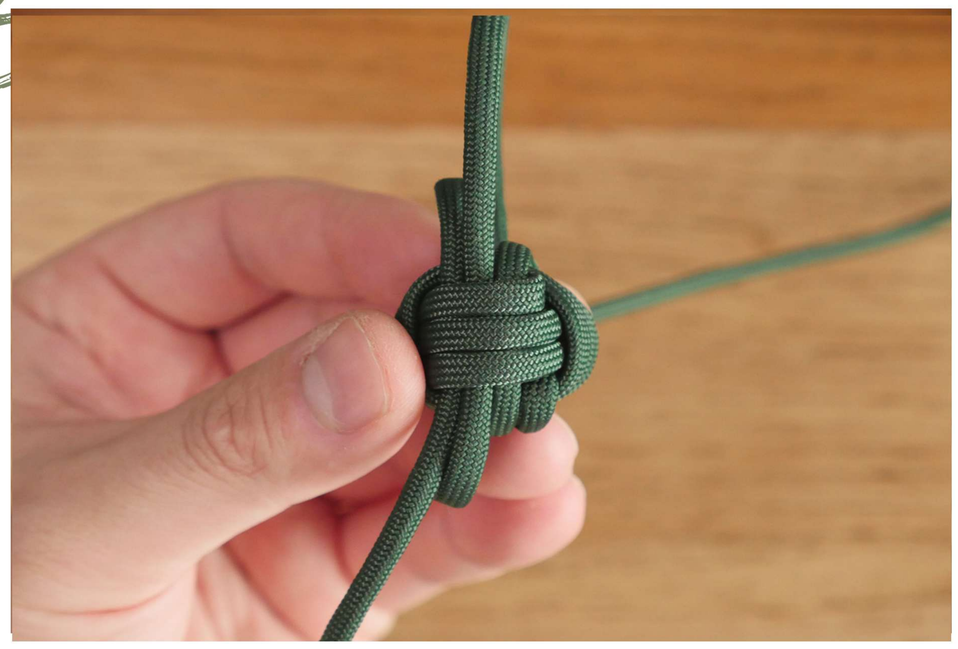
Wrap the 3 final passes around the marble.

12



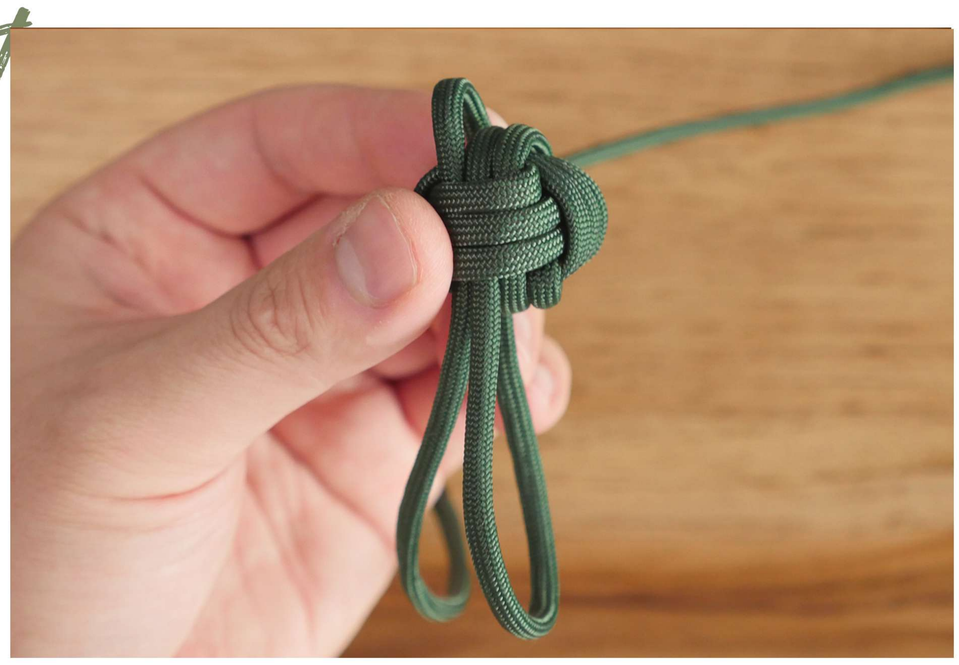
Begin to cinch the slack out of the monkey's fist. Starting with the first set of passes you made.

13



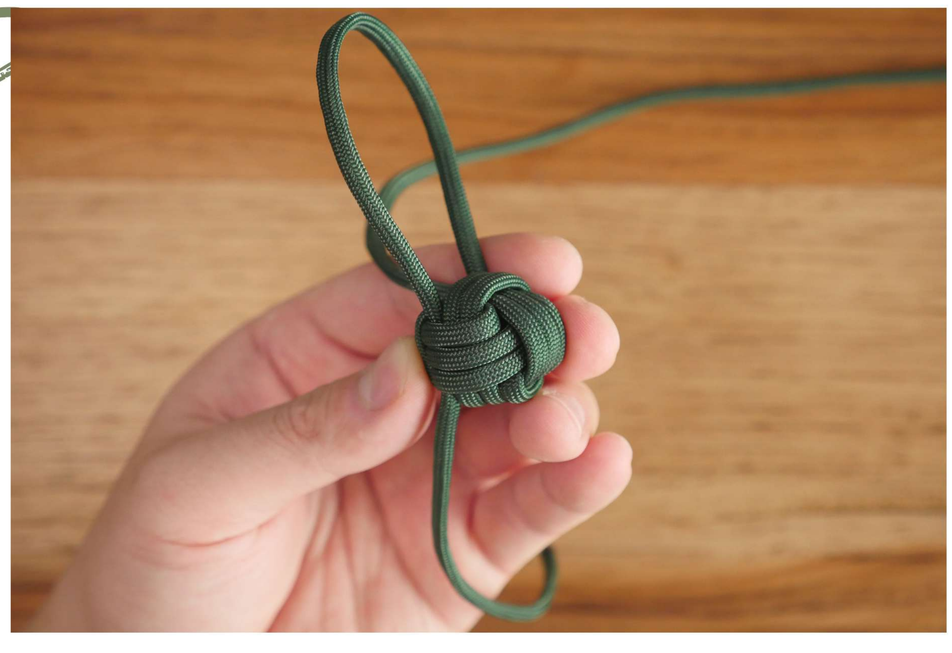
Work the slack out of the monkey's fist to one end of the paracord.

14



Keep track of which strand you're working on as you can pull the slack back and forth and not make any progress.

15

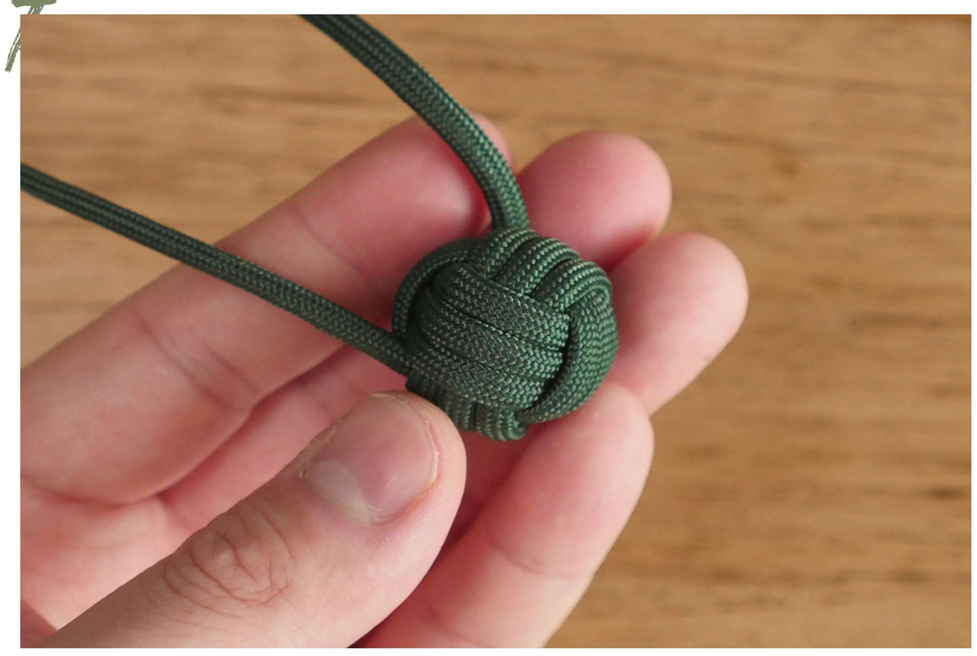


You may have to do more than one round of tightening. A second round usually results in a tighter and neater monkey's fist.

16

If both ends aren't even, you can work some paracord back through the monkey's fist from one end to the other.

17



Once fully tightened, your monkey's fist is complete. You can now tie some snake knots or a diamond knot to finish it as a keychain.

KNOT AND LOOP COBRA

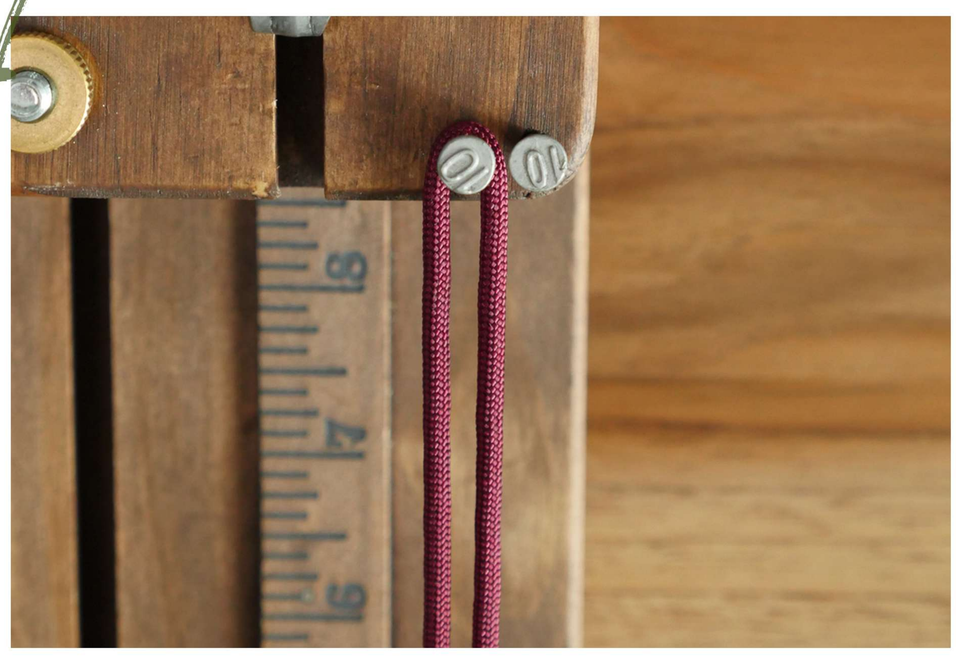
KNOT AND LOOP COBRA

"The Cobra Knot is quite possibly the most popular paracord bracelet out there as it's often the first pattern that most beginner's learn. It's also a knot that has uses in more intricate projects as well. This is a must learn knot!"

TOOLS YOU WILL NEED

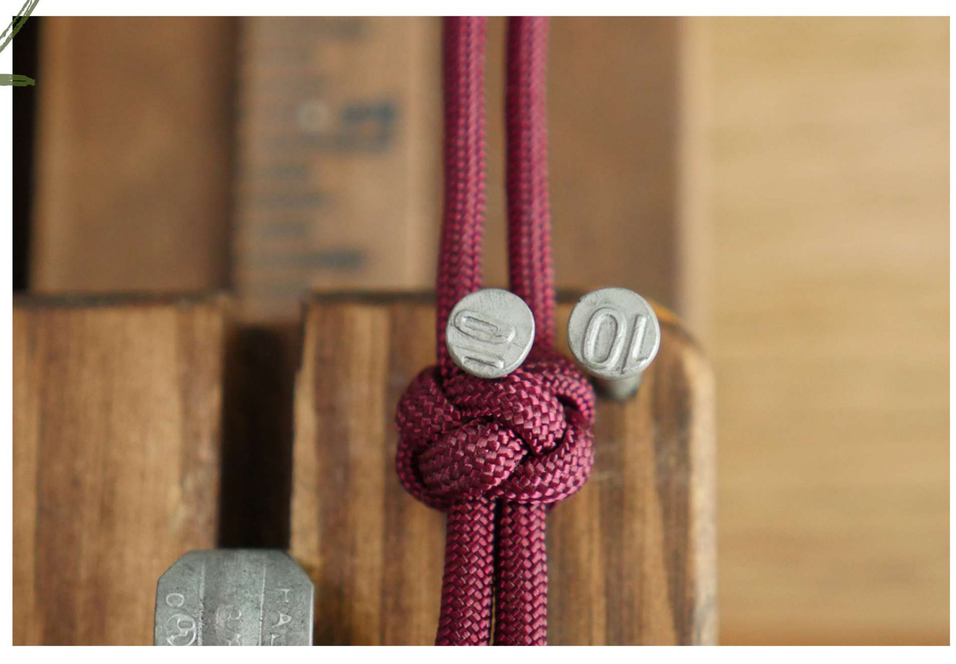
3.5 ft (107 cm) Gold 550 Paracord
3.5 ft (107 cm) Grey 550 Paracord
2 ft (61 cm) Burgundy 550 Paracord
Bracelet Inner Circumference: 7 in (17.78 cm)

1



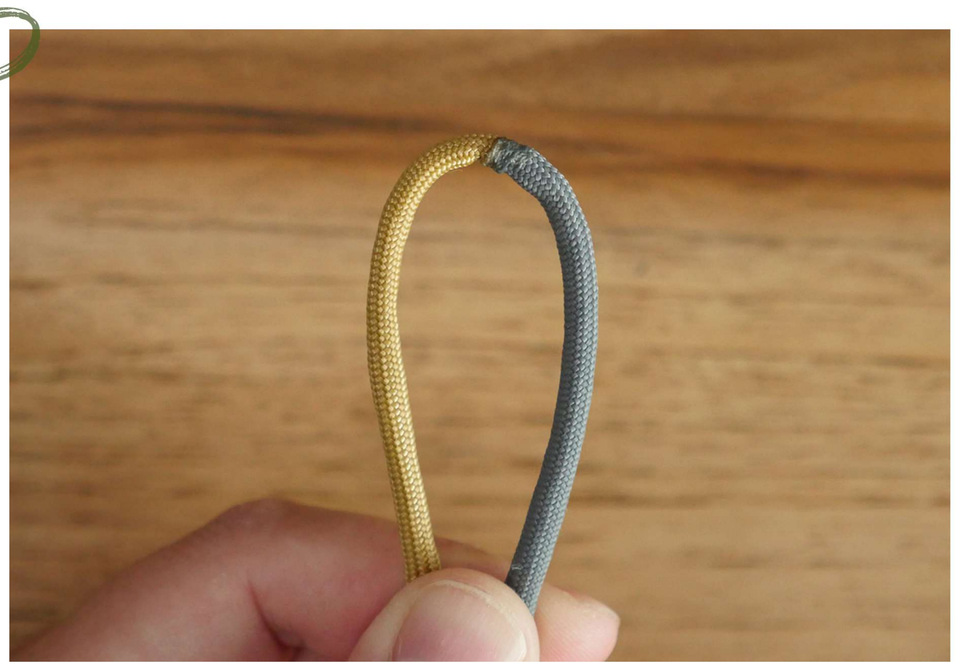
Hitch the top of your 2-strand core to the top of your jig if using one.

2



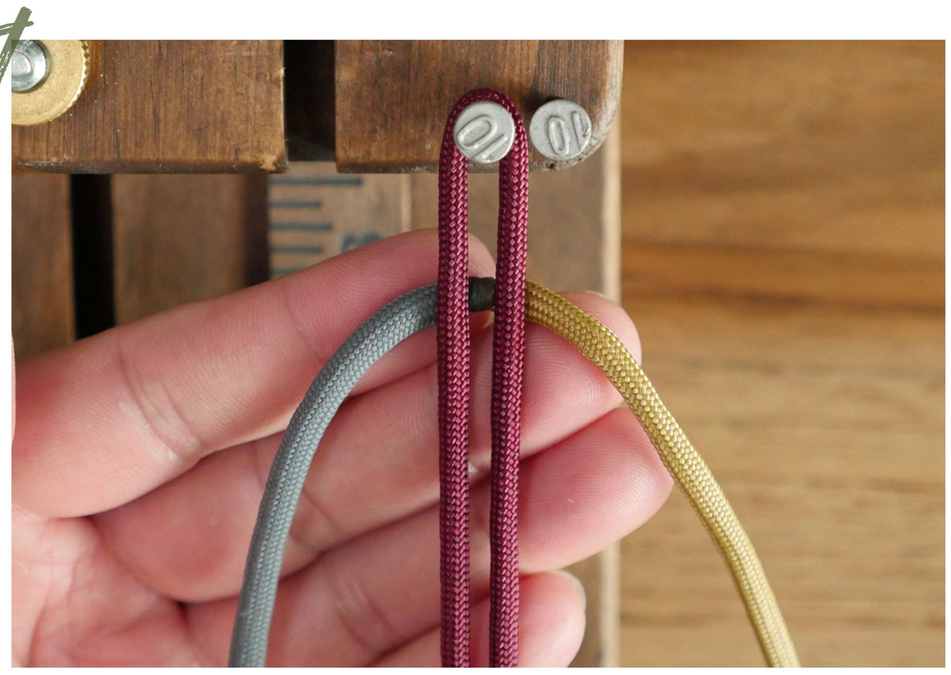
Tie a diamond knot (see pg. 22) and hitch it to the bottom of your jig.

3



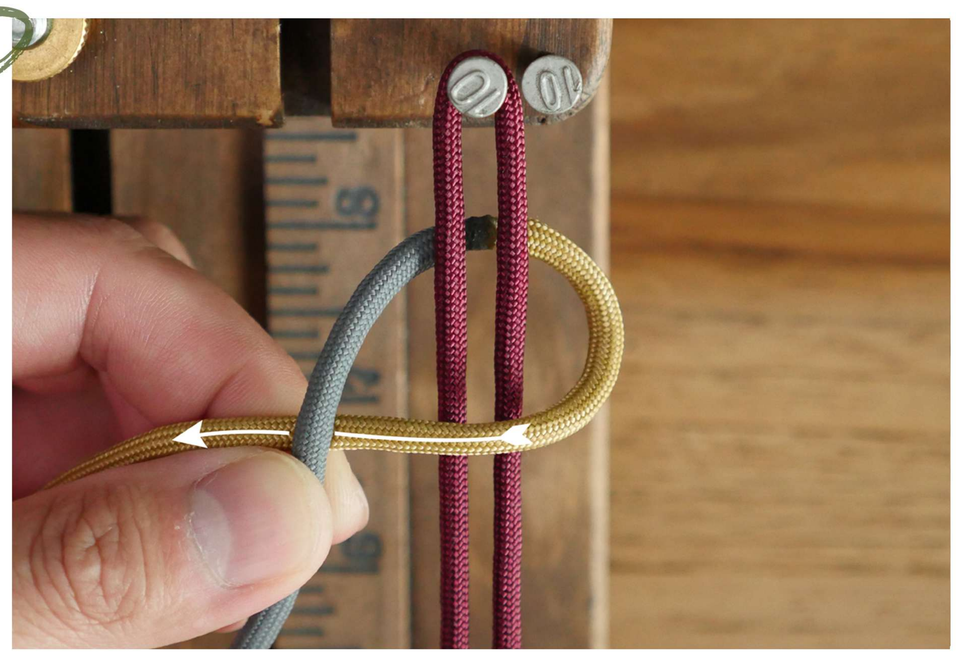
Join your two colors by melting them together, clip the ends, melt slightly with a lighter and hold the molten ends together while they cool.

4



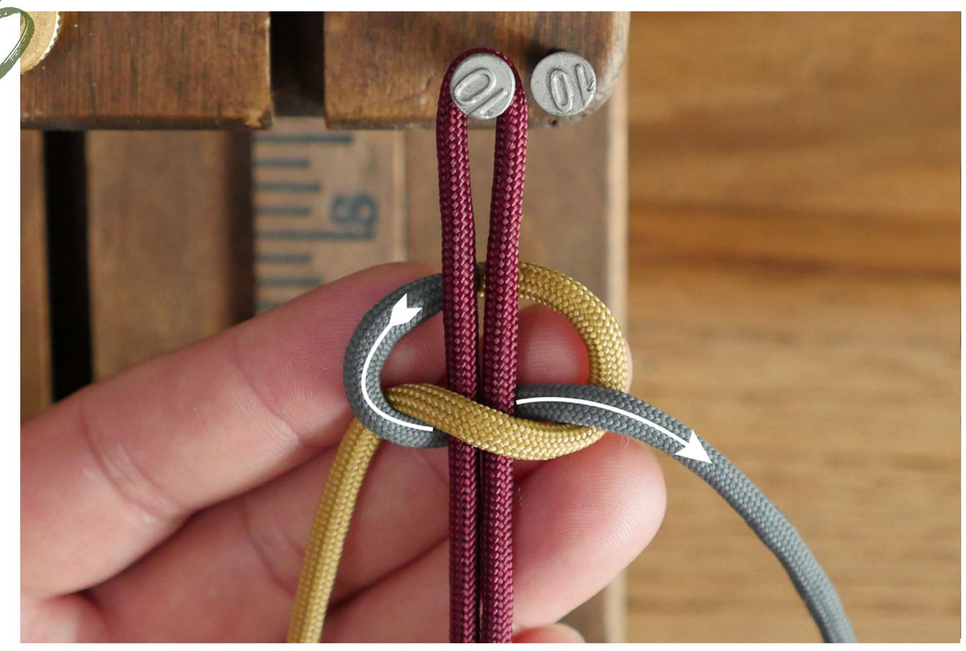
Hold the melted section of the two cords behind the two strand core.

5



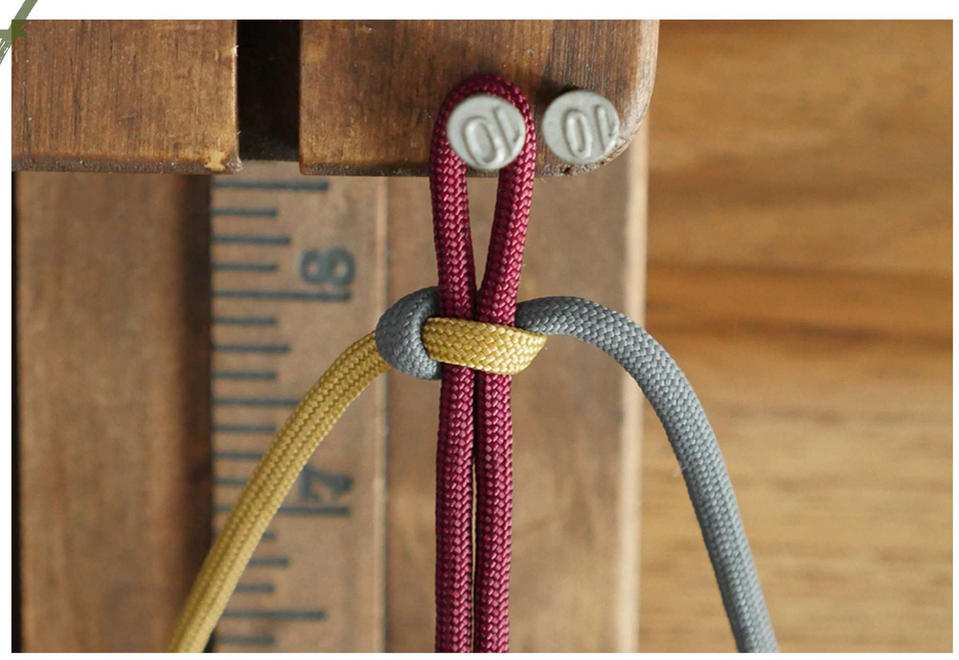
Pass the gold cord on the right over the two strand core and under the opposite cord.

6



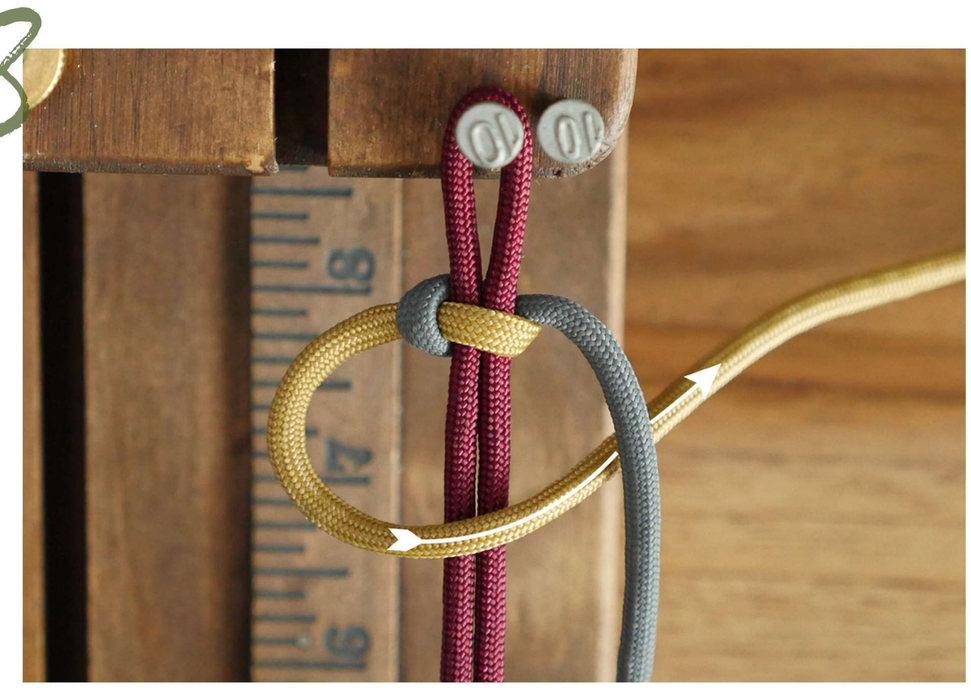
Pass the grey cord behind the core strand and out the gold crook on the right.

7



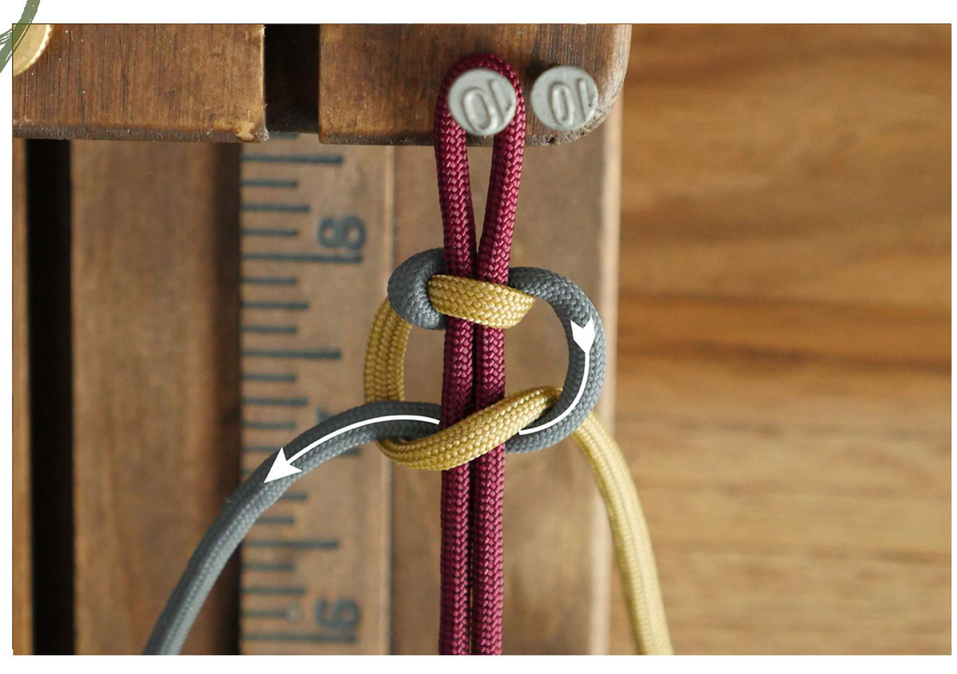
Pull both strands tight and complete the first cobra knot.

8



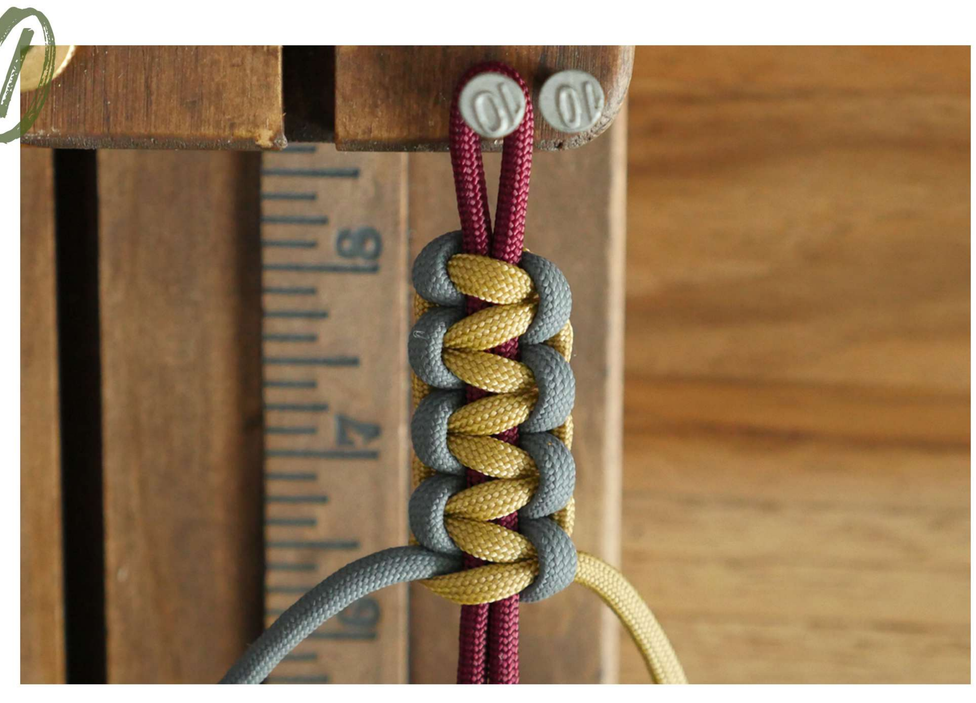
Continue with the gold strand once again, going over the core and under the grey strand.

9



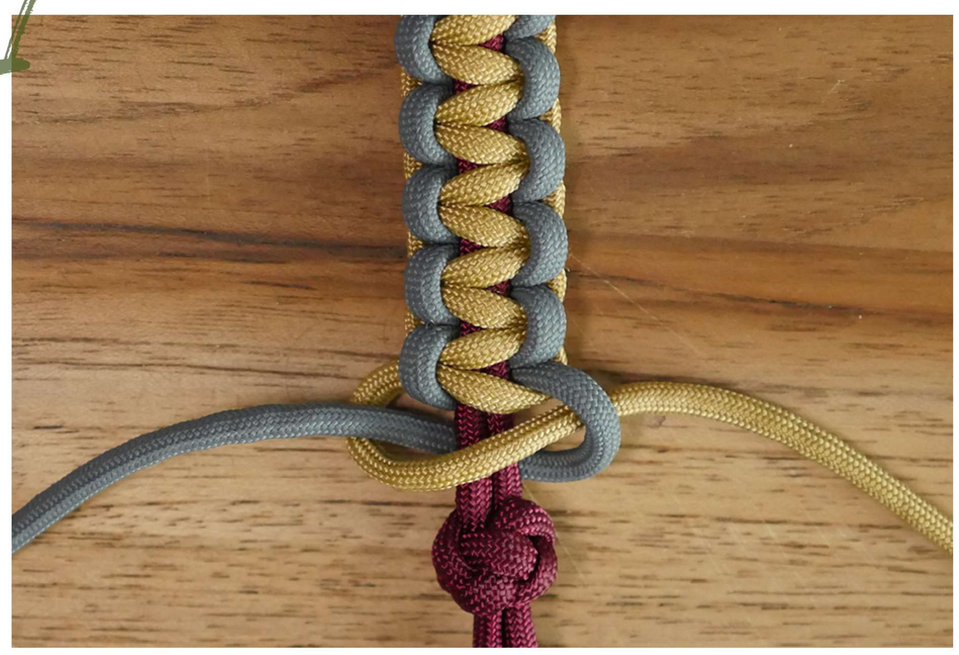
Pass the grey strand behind the core and through the gold crook on the left.

10



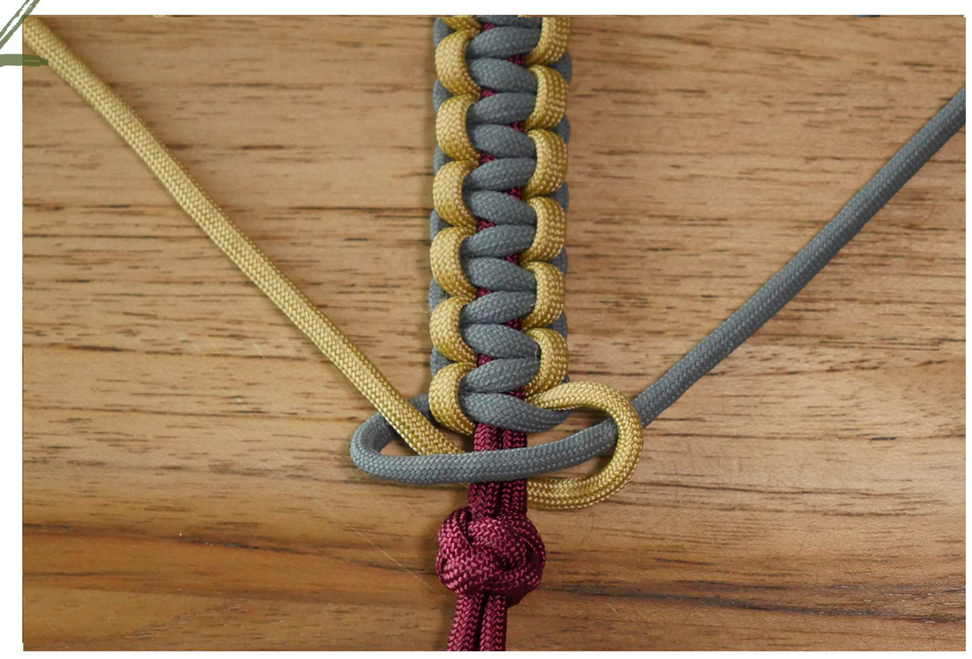
Continue steps 5-9 and continue tying down the core. Always lead with the same strand. In this case, it's the gold strand.

11



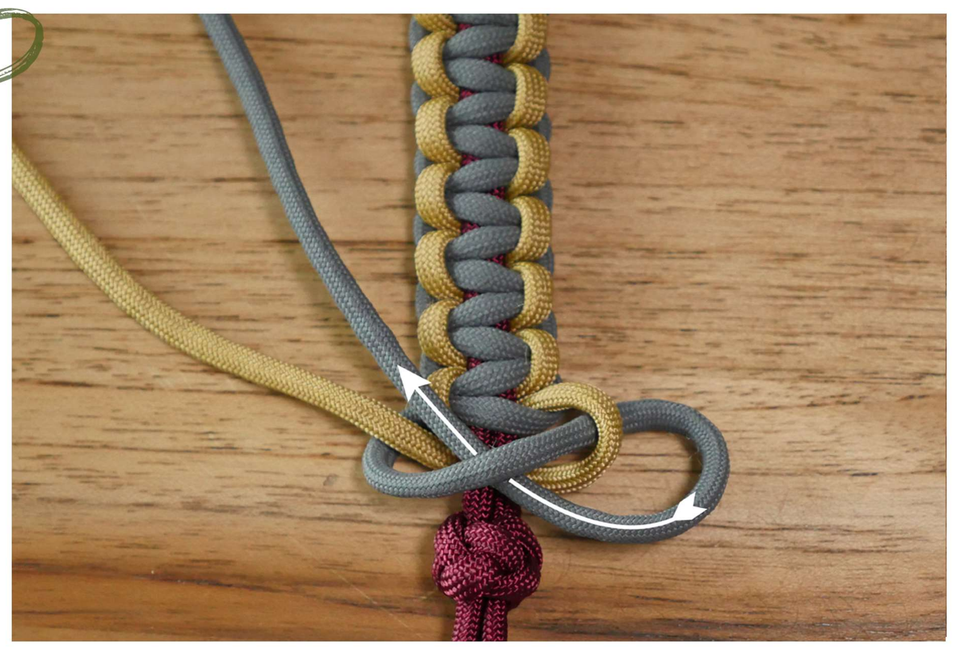
Once you've made your way down to the bottom, leave the last knot loosely tied.

12



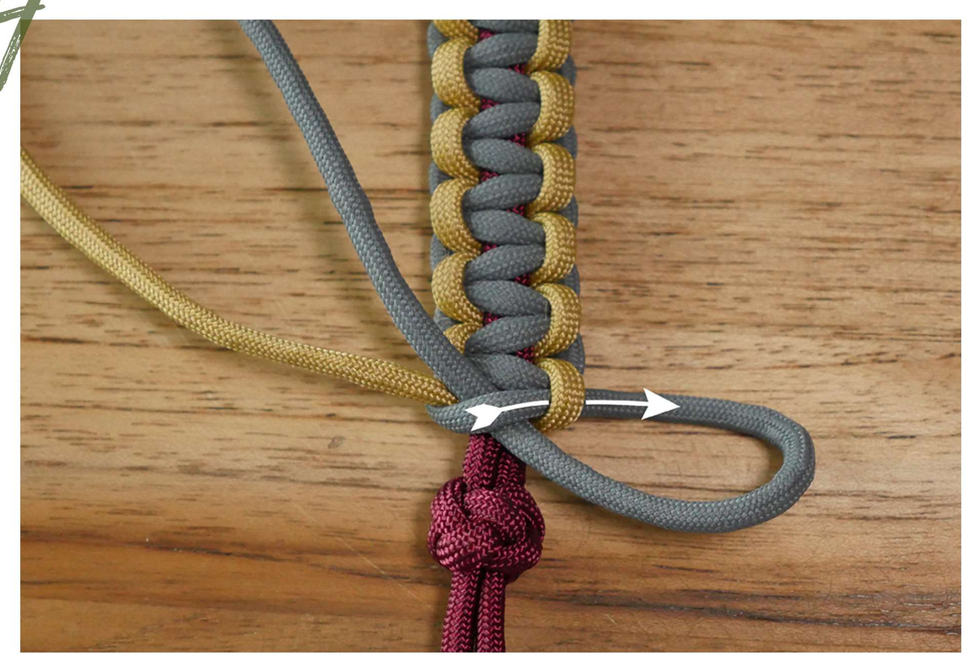
Turn the bracelet over.

13



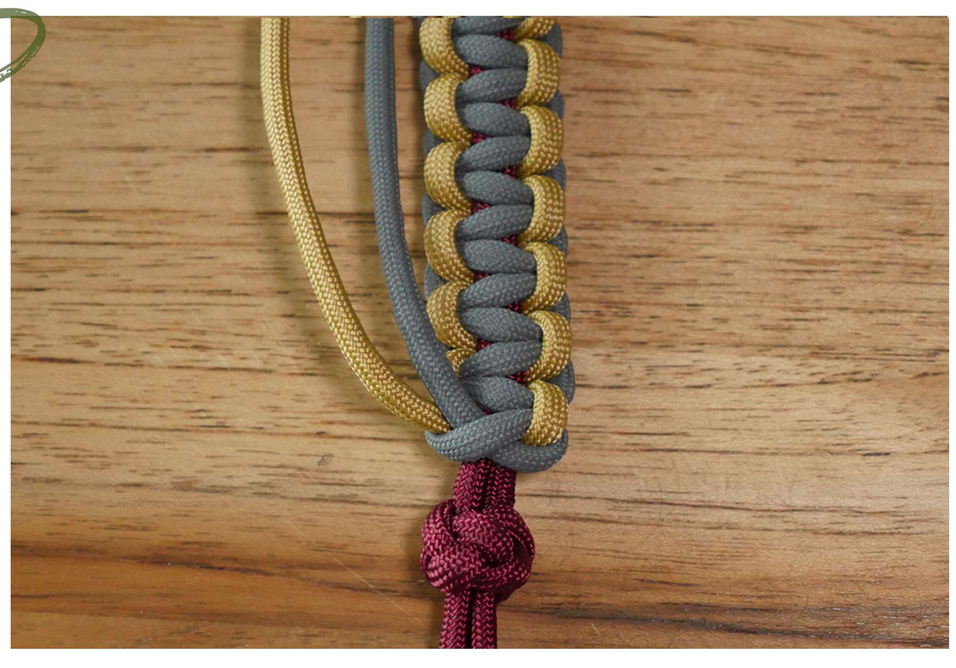
Pass the grey cord under the last knot on the back.

14



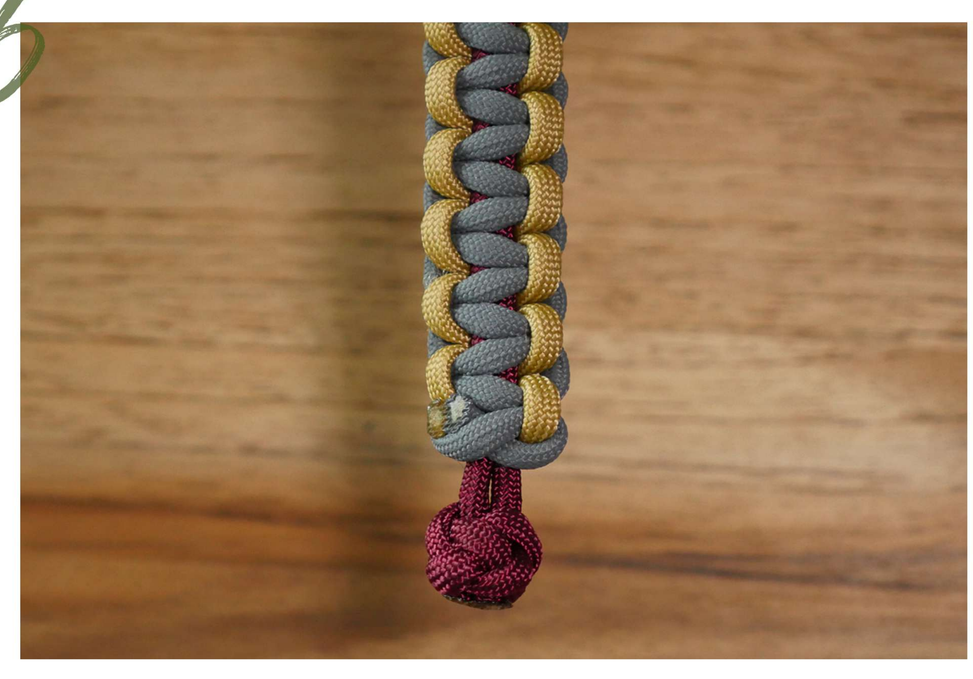
Tighten the last knot by pulling on the cords.

15



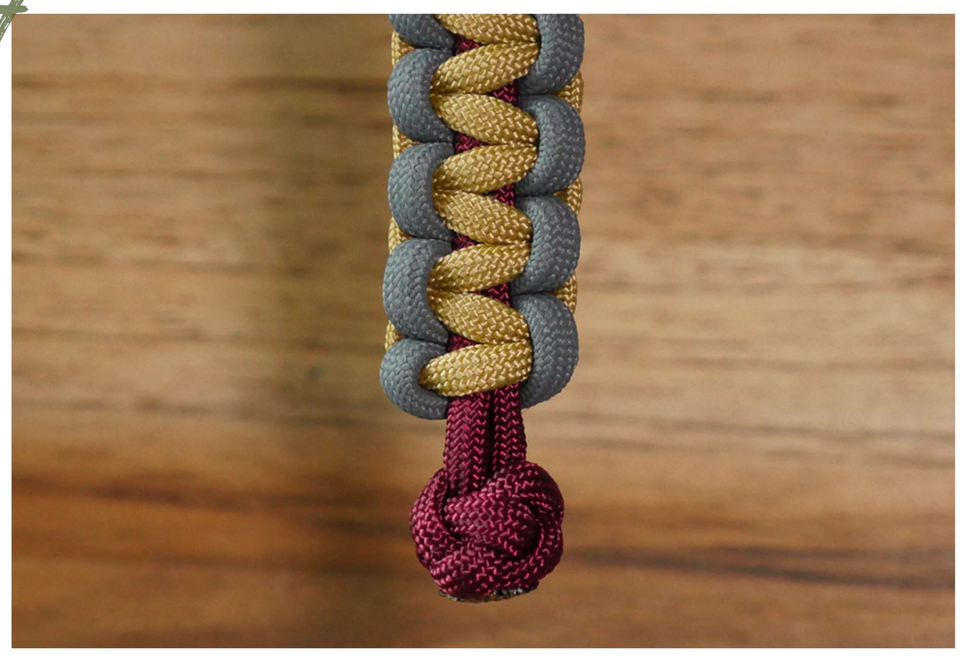
Pull the last bit of excess grey cord through the last knot.

16



Snip and singe the excess grey, gold, and burgundy cords.

17



You're now finished!

THANK YOU!

I hope you enjoyed this free mini-eBook! There is much more to come as the full version of this book is coming out very soon with over 20+ instructionals and projects. It will also feature full color step-by-step pictures along with detailed captions.

The philosophy behind it will be that after you go through all of the projects in the full eBook, you'll have a solid grasp of the most important paracord knots and concepts to give you a solid grasp of how to make great paracord crafts! Weavers Of Eternity Vol. 1 is on it's way!

Best Regards,
- Tim
